

Autofocus Multicode Reader and In-Line Verifier VHV5-F

The **VHV5-F Autofocus Multicode Reader and In-Line Verifier**, combined with the **WebLink** user interface, provides an unparalleled level of code reading performance and next-level user experience, enabling any user to easily set up the most demanding code reading applications on the factory floor.

The VHV5-F has built-in internal lighting 10 times more powerful than the MicroHAWK line of readers, as well as a 2.3 MP global shutter sensor running at 80 frames per second, and a 5 MP global shutter sensor running at 40 frames per second. A powerful quad-core processor with built-in NPU allows for near-frame rate reading speeds in most applications.

The WebLink user interface features Smart Quick Set functions to learn, optimize, and deploy in a matter of seconds in difficult static direct part mark (DPM) reading applications or very high-speed label reading applications.

The VHV5-F is pin-compatible with the MicroHAWK V430-F and V440-F readers, ensuring a clear upgrade path with all the same wiring accessories.

Features

- Smallest reader in its class.
- High-end multi-core processor (including NPU for AI). 13 times the processing power of the MicroHAWK.
- 2.3 MP (80 FPS) and 5 MP (40 FPS) global shutter sensors.
- Four autofocus lens focal length choices to cover the widest range of applications.
- Highest-power lighting on the market today.
- Third port for external lighting, compatible with most major machine vision light suppliers.
- Support for digital I/O, RS-232, Ethernet TCP/IP, EtherNet/IP™, and PROFINET communications.
- IP69K-rated.
- PoE+ or direct 24V power.

Note 1: VHV5-F readers are sold without cables or mounting. These items can be found in later sections.

Note 2: The VHV5-F uses the same Parallel IO cables and interconnect accessories as the MicroHAWK V430-F and V440-F.

Note 3: X-Mode is suitable for all labels as well as low-print-grade codes and DPM.

Note 4: The wide lens is not recommended for in-line verification.

VHV5-F

Determine the Correct Reader Model for the Application

There are eight basic models of the autofocus VHV5-F. The models are derived from two sensor resolutions: **2.3 MP** and **5.0 MP**; and four different autofocus lenses: **Wide, Medium, Narrow, and Long**. The charts below show the key specifications for the two sensors and four lenses.

Sensor	Pixels	Pixel Size	Frame Rate
2.3 MP	1920 x 1200	3.0 µm	80 FPS
5.0 MP	2472 x 2048	2.74 µm	40 FPS

Lens Name	Lens Focal Length (mm)	Focus Range (mm)
Wide	6.42	55-500
Medium	8.50	55-500
Narrow	12.50	100-1,000
Long	20.00	100-2,000

These models, derived from the two sensor types and four lens types, provide maximum flexibility to match the reader to the application.

Step 1 – The first step in determining the correct model is to evaluate the application by collecting key pieces of information. This process is described in the section below titled "Evaluate the Application".

Step 2 – The second step is to use that data to look up the best sensor / lens combination in the "Distance, Field of View and Readability Tables" section below that best satisfies the application requirements.

Evaluate the Application

To choose the correct reader, perform an application evaluation and gather the following information:

- **Desired Mounting Distance** – Measured from the front of the reader to the code. Distance is usually dictated by mounting constraints.
- **Required Field of View** – View area required to see all codes. This should include the nominal code position, size, and expected variation in position while running.
- **Code Type** – Either 1D or 2D. Composite codes count as 2D.
- **Code Quality** – Two levels: (1.) High-quality, high-contrast codes. (2.) Lower-quality, lower-contrast codes marked with laser, dot peen, etc., generally referred to as direct part marks (DPM).
- **Code Size (Mils)** – For 1D codes, code size is the width of the narrowest bar in the code. For 2D codes, code size is the width / height of an individual cell or block (square element) in the code. Code size is typically specified in Mils, where 1 Mil = 1/1,000th of an inch. (0.0254 mm).
- **Code Color** – Code color can sometimes be a consideration. The most common light color for code readers is red. However, in the case of red print, Red light will cause the red print to disappear. The user should take this into consideration and order the unit with white LEDs instead.

Key Point: Code Size is not the overall size of the code, but is the size of the smallest element in the code. The example below shows that for 1D codes, the Code size specified as the width of the thinnest bar or space. For 2D codes, Code Size is the width / height of one of the black or white squares.

1D Barcode

2D Code

Choose the Model

The readability tables below show the sensor/lens combinations for VHV5-F models. For each reader-to-part distance, the tables show the resulting field of view, as well as the smallest code size that can be decoded reliably at that Distance in that Field of View.

Use the distance and field of view requirements determined in your application evaluation to choose the model that will provide the highest resolution for reading your Code Type (1D or 2D) and Code Quality (High-Contrast Label quality, Lower Contrast, DPM quality).

Note: Codes with sizes that are larger than the stated minimum can be assumed to be readable.

The following chart shows how the minimum code sizes in the readability tables have been determined. High-contrast (label-quality) marks need fewer pixels per element (lower PPE) to be decoded reliably. Low-print-quality and DPM (direct part mark) codes often require a higher PPE to get the same high read rates. Code grading, which involves actual measurements of the cells themselves, requires an even higher PPE.

Code Type	Minimum PPE	Preferred PPE	PPE for Code Grading
1D Code – Label Quality	1.6	2	6 to 8
1D Code – Direct Part Mark	2	2.5	6 to 8
2D Code – Label Quality	2.75	3.5 to 5	8 to 10
2D Code – Direct Part Mark	3.5	4 to 5	8 to 10

Distance, Field of View, and Readability Tables

Use the following tables to identify the Sensor/Lens combination that most closely matches the reader application requirements. The tables below use the Minimum PPE value from the table above.

Example: If the Code Type is a 2D DPM, and the Code Size is 15 mils, the Medium Lens table below shows that a code as small as 13.9 Mils can be read out to 250 mm, in a field of view of 181 x 113 mm.

- FHV-VNB2 3M
- FHV-VNB2 5M
- FHV-VNB2 10M
- FHV-VNB2 20M

*1 – Overall cable length varies based on model number. Example: FHV-VNB2 2M is a 2 meter cable.

X-Code to RJ45 Ethernet Cable (High Flex, Right- Angle, Black Jacket) – 2 Meters, 3 Meters, 5 Meters, 10 Meters, 20 Meters

- FHV-VNLB2 2M
- FHV-VNLB2 3M
- FHV-VNLB2 5M
- FHV-VNLB2 10M
- FHV-VNLB2 20M

*1 – Overall cable length varies based on model number. Example: FHV-VNLB2 2M is a 2 meter cable.
