Introducing the F3SJ Series

Three Versions available to meet your exact safety needs

All versions conform to the latest Type 4, PLe and SIL3 requirements.

**F3SJ-E: EASY type**
Easy, simple and affordable hand protection

**F3SJ-B: BASIC type**
Basic, simple hand protection and muting functions

**F3SJ-A: ADVANCED type**
Supports finger protection, and complex blanking and muting functions
Offering the best selection of safety light curtains for your guarding needs.
Three F3SJ types allow easy selection for your application.

The F3SJ series of safety light curtains offers a tailored approach for a variety of production environments. Conventional safety light curtains offer full-featured models, even when only simple intrusion detection is needed. The F3SJ series offers a product range that allows you to choose the best product according to your application needs.

The EASY type has been added for simple hand detection, while the BASIC type adds the potential for series connection and simple muting functions.

The F3SJ series now allows you to select the best safety light curtain for your application environment without paying for unused functions.

- For simple and affordable hand protection:
  The EASY type (F3SJ-E)

- For simple hand protection, series connection and muting functions:
  The BASIC type (F3SJ-B)

- For finger protection, series connection, complex blanking and muting functions:
  The ADVANCED type (F3SJ-A)
Overview (continued)

Applicable Standards
EN ISO 13849-1: Category 4, PLe
IEC 61496-1.-2: Type 4
IEC 61508-1 to 3: SIL3

For stand-alone devices

**EASY type (F3SJ-E)**
Can be used for simple hand intrusion detection. Mounting now takes less than half the man-hours that conventional models take.
Despite its simplicity, the EASY type is a highly reliable safety light curtain.

A new standard of Safety Light Curtain

**BASIC type (F3SJ-B)**
The muting function allows use of the safety light curtain in a variety of manufacturing environments.
The flexible mounting supports up to three sets of series-connected sensors.

For special purposes including finger protection

**ADVANCED type (F3SJ-A)**
The detection capability supports finger protection through use of 14 mm resolution. The ADVANCED type has a wide variety of muting andblanking functions to increase productivity.
Implementation cost reduction with 1/2* the mounting time:

Start with the “EASY type”

The EASY type safety light curtain is well suited for straightforward on/off detection applications.

By carefully selecting the available functions, we have reduced man hours necessary for installation by approximately 1/2 when compared with existing models.

Reduced installation time means added savings to your project’s budget, start with the EASY type.

Easy-to-view blue LEDs make beam adjustment easier!

1/2 the mounting time

Fixed response time makes calculation of the safety distance easier.

Reduced wiring, quick mount brackets and easy-to-view alignment beams all add up to cost savings.

Additionally, with one fixed response time, it is now easier to calculate the safety distance.

Machine safety first, narrowed down to the simplest functions:

Upon detection of personnel, the machine stops.

Simple yet very optimal.
Overview (continued)

Global Support
OMRON Automation and Safety will support you through our global network.

Easy-to-view Diagnostics
These indicators enable you to intuitively know the status and cause of any error allowing faster installation while reducing machine down time.
Fits any site, equipped with muting functions and series connection:

**Use the “BASIC type”**

In addition to the simple functions inherited from the EASY type, such as global support, easy-to-view indicators, the BASIC type includes series connection and simple muting functions. This enables the BASIC type to satisfy installations that require multiple safety light curtains.
Overview (continued)

Up to three sets-connected in series
It is possible to connect up to three sets of safety light curtains in series. These sensors can be placed in a U-shaped or L-shaped pattern with a single power line, thus requiring less wiring.

Instant visibility of process trouble during muting
The BASIC type includes a muting function which temporarily disables the safety light curtain when a workpiece passes through. In the event of any trouble occurring, the error can be instantly recognized from the pattern of the LED indicators, allowing for a fast solution.

Functions inherited from the EASY type
Simple functions such as universal power voltage specification, easy-to-view diagnostics, and fixed response time have been inherited from the EASY type. As a result, expect reduced work-hours at each stage of use, from design and installation to operation.
Multi-functional for special applications such as finger protection:

Select the "ADVANCED type"

The detection capability supports finger protection through use of 14 mm resolution. The ADVANCED type is equipped with various functions such as blanking, muting and the programming of warning zones. All settings can be done via an easy to use software tool. This tool simplifies installations that were previously complicated, again our way of reducing cost and increasing productivity.

Tool for setting parameters and checking the system status

With the ADVANCED type (F3SJ-A) "SD Manager", all parameters can be set and the system status can be checked with a personal computer. Complex settings are now simple to configure.

Detection capability supports finger-protection

Even if the distance from the hazard is short, we have prepared a lineup that includes safety light curtains with a detection capability of 14 mm.
Overview (continued)

**Versatile muting function possible**

Equipped with partial muting that disables only the beams where a workpiece passes through, and position detection muting that disables the beams while detecting the position of a machine or robot.

**The blanking function disables specific beams of the Safety Light Curtain**

If a part of the mechanical equipment is within the detection zone of the Safety Light Curtain, the relevant beams can be disabled. This is possible not only with non-moving parts but also with moving parts.

**Setting up a warning zone to prevent unnecessary stoppage**

Under normal use, if an intrusion occurs in the safety zone, the machine will stop immediately. However, use of a warning zone will only notify the operator that an intrusion has occurred. This can be used to prevent carelessness resulting in machine stoppage on the part of the operator.
Providing ease-of-use and ease-of-mounting through ingenuity

In pursuit of fast-easy mountable brackets

Omron has developed “quick mount” brackets which speed mounting to aluminum framing and reduce mounting time in half, when compared with existing models. This unique design allows for smooth horizontal movement, beam alignment is easy.

Configured to freely rotate the main body of the sensor

Set the main sensor body into the quick mounting bracket. Use the clamps to tightly clamp the upper body of the sensor while lightly clasping the lower body.

Fix the circular fixtures to the surface of the aluminum frame and set the upper bracket onto the upper circular fixture.

Slide the lower bracket up towards the lower circular fixture and tightly clamp the lower body of the sensor. Once done, mounting is concluded.

Top and bottom blue LEDs enabling beam alignment

Simple positional alignment can be done using the blue LEDs at the top (TOP) and bottom (BTM) of the emitter and receiver. With the blue LEDs ON, you can see at a glance that the beams' positions are correctly aligned.
Overview (continued)

**Easy-to-understand diagnostics**

Light curtain status can be immediately determined as the LED will light to indicate the status or possible error. As a result, there is no need to refer to a manual for the meaning of the diagnostics.

Providing multiple functions to cope with various safety requirements

Series connection up to 10 meters. Very convenient.

Sensors with protective heights of up to nearly 2.5 meters are available for applications that involve large-sized workpieces. And if you need to make changes in the future, you can always extend the protective height with series connections. Up to four sets, or 400 beams, can be series-connected, and with series connection cables up to 15 meters in length, applications can cover a wide area.

Tool for setting parameters and checking the system status

"SD Manager" PC Setting Support Software  
(For F3SJ-A)

The "SD Manager" PC Setting Support Software helps reduce the time required for installing and troubleshooting the Safety Light Curtain.

- Beam alignment is easier.
- The ambient incident light intensity can be checked.
- The error log can be displayed.

The incident light level can be displayed in a bar graph for each beam.

The incident light level when the light emission of the Safety Light Curtain is stopped is displayed in a bar graph.

The cause of the errors and countermeasures are both displayed.
Overview (continued)

Achieving muting function without a controller
The muting function temporarily disables the light curtain when an object must pass through the detection zone, such as when supplying a workpiece to your equipment. In the past, this function required a dedicated muting controller, but now it is built into the F3SJ. To use the muting function, purchase the Muting Key Cap (for F3SJ-B: F39-CN10 and for F3SJ-A: F39-CN6)(sold separately). The muting function is enabled simply by replacing the Unit’s cap with this Key Cap. In addition, a muting sensor that determines the muting timing, as well as a muting lamp that alerts the muting status to other operators, should be connected to the F3SJ.

Equipped with two muting functions
With F3SJ-A, the muting function temporarily disables the Safety Light Curtain when an object must pass through the detection zone, such as when supplying a workpiece to your equipment. "Partial muting," which further heightens the level of safety, and "position detection muting," which allows muting when the safety status can be determined by the position of a machine (such as a robot), have been added to the muting function.

Partial muting
Partial muting raises safety by muting only the beams of the Safety Light Curtain in the area where the workpiece passes through, while preventing muting in all other areas.

Position detection muting
This is used in applications where the workpiece is set in position each time by an operator, and then a turntable or positioning robot moves the workpiece to the area where the work is done. A limit switch or other means is used to detect when the robot is in a safe position, and muting is then applied.

Example of a muting key cap for F3SJ-A
The Safety Light Curtain can be disabled when an AGV carrying a workpiece passes through.

Built-in muting function
No controller required. Simply attach the Key Cap (sold separately) to the sensor.

Key caps for muting
- F39-CN6 (for F3SJ-A)
- F39-CN10 (for F3SJ-B)

Function List (continued)

**Self-test Function**
A self-test is performed to check for errors when the power is turned ON. Also, the self-test is regularly performed (within the response time) while operating.

**External Test Function**
This function stops the transmitter emissions using an external signal. It can be used to verify that a safety system should properly stop when F3SJ is interrupted.

**External Device Monitoring Function**
This function detects malfunctions, such as welding, in external relays (or contactors) that control the hazardous part of a machine. This function constantly monitors that a specified voltage is applied to the receiver’s external device monitoring input line, and the system enters lockout state when an error occurs. The relay’s operational delay can be up to 300 ms without being evaluated as an error. For example, if the normally closed N.C. contact does not close within 0.3 s after the safety outputs turn from ON to OFF, and a specified voltage is not applied to the external device monitoring line, it is evaluated as an error and the system enters a lockout state. To utilize this function properly, use safety relays and contactors that have force guided or mechanically linked contact structure.

**Interlock Function**
The F3SJ turns the safety outputs OFF when its power is turned on or its beam is interrupted and holds this state until reset input is applied. This state is called “interlock”. Two methods can be used to reset the interlock state: “auto reset that automatically turns control outputs ON when the interrupting object is removed” and “manual reset mode that keeps control outputs OFF until a reset signal is provided, if the interrupting object is removed”.

**Auto Reset**
When the interrupting object is removed from the detection zone, the safety outputs automatically turn ON. Auto reset is used on machines where a worker is not able to enter the area between the detection zone and the hazardous part of the machine.

**Manual Reset**
When a reset input is given while no objects are in a detection zone, the safety outputs turn ON. This allows the machine to be manually reset using a reset switch after ensuring safety, preventing unexpected startup.

**Auxiliary Output Function**
The auxiliary output is used to monitor the status of the F3SJ. This output can be connected to a device such as a programmable controller.

**Muting Function**
Muting function temporarily disables safety function of the F3SJ, keeping safety output ON even if beams are interrupted. This makes it possible to install safety light curtains for material transfer carriers, enabling both safety and productivity.

**Override Function**
The override function turns the safety outputs ON when the muting start condition is not satisfied. If a workpiece stops while passing through the F3SJ causing a muting error, the normal state cannot be recovered unless the workpiece is removed from the muting sensors and the detection field of the F3SJ. However, the override function will mute the safety outputs of the F3SJ so that the conveyor can be restarted to move the workpiece out of the muting sensors and detection zone.

**Partial Muting Function**
Partial muting function secures safety without enabling muting except for beams when a workpiece passes.

**Position Detection Muting**
A limit switch or other means is used to detect when the robot is in a safe position, and muting is then applied.

**FixedBlanking Function**
Fixed blanking function disables a specific beam of the F3SJ. This function keeps safety output ON even when part of machinery equipment exists within a detection zone.

**FloatingBlanking Function**
Floating blanking function increases the diameter of the F3SJ’s detection capability and turns OFF the safety output when multiple objects are detected. When there is a moving object with a fixed width in the detection area that we do not want to detect, the detection function can be disabled.

**Warning Zone Function**
When an individual enters, a warning lamp lights or buzzer sounds without stopping the equipment by dividing the detection zone into the detection zone and a warning zone.

**Setting Tool**
The following setting tools (sold separately) can be purchased in order to change or confirm various F3SJ-A parameters.

- F39-MC21 Setting Console
- F39-GWUM SD Manager Setting Support Software for the F3SJ

**Series Connection Function**
Up to 3 sets of the F3SJ-Bs or up to 4 sets of F3SJ-As can be series-connected. Series connection allows them to be used as a safety light curtain, requiring only one set to be wired to a controller and preventing mutual interference.
## Terms and Conditions of Sale

### 1. Offer; Acceptance
These terms and conditions (these “Terms”) are deemed part of any purchase order, purchase contract, or other purchase documents, including, without limitation, invoices, catalogs, manuals, brochures and other documents, whether electronic or in written form, to which Omron Companies (each collectively, the “Product(s)”) are sold by Omron Electronics LLC and its subsidiary companies ("Omron"). Omron objects to any terms or conditions proposed in Buyer's purchase order or other documents which are inconsistent with, or in addition to, these Terms. These Terms are the sole terms governing the sale by Omron to Buyer of the Products, and shall govern all purchase orders, confirmations, purchase agreements, acknowledgment of purchase orders, contract agreements and other documents relative to the sale, procurement, delivery or purchase of the Products. Any additional or different terms appearing in Buyer's purchase order or other documents will not govern the sale by Omron unless specifically agreed to in writing by Omron prior to delivery of the Products in question.

### 2. Prices; Payment Terms
All prices stated are current, subject to change without notice, and are only applicable to the specific Products being ordered. Buyer shall be responsible for, and shall bear all costs involved in, obtaining any government approvals required for the importation or sale of the Products. All taxes, duties and other governmental charges (other than general sales taxes) included in the quoted price are the sole responsibility of Buyer. All taxes, duties and other governmental charges (other than general sales taxes) imposed directly or indirectly on Omron or required to be collected directly or indirectly by Omron for the manufacture, production, sale, delivery, importation, consignment or use of the Products shall be paid by Buyer. Such taxes, duties and other governmental charges shall be charged to and remitted by Buyer to Omron.

### 3. Delivery
(a) Delivery dates set forth in any documentation of the price list, quotation, purchase order or otherwise are intended only as estimates and are not contractual. Buyer may not assign any claim, if any, arising from failure to deliver on such dates. Buyer shall be responsible for, and shall bear all additional costs involved in, obtaining any government approvals required for the importation or sale of the Products. Omron will provide applicable third party certification documents identifying Product in the Buyer's application or use of the Product. At Buyer's request, Omron will list, as applicable, potential third-party certification documents for the Product in the Buyer's application or use. Please consult with your Omron's representative at any time for clerical, typographical or proofreading errors or omissions.

### 4. Change in Specifications
(a) Waiver. Buyer shall not waive any breach or default of any provision hereof or any delay in the performance hereof by Omron Companies (herein referred to as "Omron") and any such waiver by Omron shall not be deemed to be a waiver of any other breach or default by Omron or to be a continuing waiver, unless specifically agreed to in writing by Omron.

### 5. Shipping; Delivery
(a) The sale price does not include delivery and transportation costs, if any, and shall be at Buyer's expense. Buyer may not assign any claim if any, arising from failure to deliver on such dates. If the financial position of Buyer at any time becomes unsatisfactory, Omron may, without liability or liability of any kind, cancel any unshipped portion of Product, (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) rely or request Buyer to bear all additional costs involved in, obtaining any government approvals required for the importation or sale of the Products in question.

### 6. Taxes
All taxes, duties and other governmental charges (other than general sales taxes) imposed directly or indirectly on Omron or required to be collected directly or indirectly by Omron for the manufacture, production, sale, delivery, importation, consignment or use of the Products shall be paid by Buyer. Such taxes, duties and other governmental charges shall be charged to and remitted by Buyer to Omron. Omron will provide applicable third party certification documents identifying Product in the Buyer's application or use of the Product. At Buyer's request, Omron will list, as applicable, potential third party certification documents for the Product in the Buyer's application or use. Please consult with your Omron's representative at any time for clerical, typographical or proofreading errors or omissions.
