Guard Lock Safety-door Switch

Best-selling Guard Lock Safety-door Switch Available in Several Compact, Multi-contact Models

• Selectable Operation Key insertion direction and adjustable mounting ensure installation flexibility.
• Built-in switches with multiple-contact construction are available.
• Key holding force of 1,300 N minimum.
• Can be used for either standard loads or microloads.
• Lineup includes models with a conduit size of M20.
• IP67 degree of protection.
• Variety of metallic heads available.
• Conforms to ISO 14119.

Be sure to read the “Safety Precautions” on page 16.

Model Number Structure

Model Number Legend

Switch (Standard type)

D4NL-□□□□□-□□□

1. Conduit Size
   1: Pg13.5
   2: G1/2
   4: M20

2. Built-in Switch (with Door Open/Closed Detection Switch and Lock Monitor Switch Contacts)
   A: 1NC/1NO (slow-action contacts) + 1NC/1NO (slow-action contacts)
   B: 1NC/1NO (slow-action contacts) + 2NC (slow-action contacts)
   C: 2NC (slow-action contacts) + 1NC/1NO (slow-action contacts)
   D: 2NC (slow-action contacts) + 2NC (slow-action contacts)
   E: 2NC/1NO (slow-action contacts) + 1NC/1NO (slow-action contacts)
   F: 2NC/1NO (slow-action contacts) + 2NC (slow-action contacts)
   G: 2NC (slow-action contacts) + 1NC/1NO (slow-action contacts)
   H: 2NC (slow-action contacts) + 2NC (slow-action contacts)

3. Head Mounting Direction and Material
   F: Four mounting directions possible (Front-side mounting at shipping)/plastic
   D: Four mounting directions possible (Front-side mounting at shipping)/metal

4. Door Lock and Release
   A: Mechanical lock/24 VDC solenoid release
   B: Mechanical lock/110 VAC solenoid release
   G: 24 VDC solenoid lock/mechanical release
   H: 110 VAC solenoid lock/mechanical release

5. Indicator
   B: 10 to 115 VAC/VDC (orange LED indicator)

6. Release Key Type
   Blank: Standard (resin)
   4: Special release key (resin)
   (Note: Release keys are provided.)

7. Release Key Position
   Blank: Bottom
   S: Front

Switch (Metallic release key type)

D4NL-□□□□□□-□□□-SJ

1. Conduit Size
   2: G1/2 (1-conduit)
   4: M20 (1-conduit)

2. Built-in Switch
   E: 2NC/1NO + 1NC/1NO
   F: 2NC/1NO + 2NC
   G: 3NC + 1NC/1NO
   H: 3NC + 2NC

3. Head Material
   F: resin

4. Door Lock and Release
   A: Mechanical lock/ 24 VDC solenoid release
   G: 24 VDC solenoid lock/mechanical release

5. Indicator
   B: 10 to 115 VAC/VDC (orange LED indicator)

6. Release Key Type
   Blank: Standard (metal)

7. Release Key Position
   Blank: Bottom

Operation Key

D4DS-K□□□

1. Operation Key Type
   1: Horizontal mounting
   2: Vertical mounting
   3: Adjustable mounting (horizontal)
   5: Adjustable mounting (horizontal/vertical)

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.
## Ordering Information

### List of Models

**Switches (Operation Keys are sold separately.)**

Consult with your OMRON representative when ordering any models that are not listed in this table.

## Specifications

### Standards and EC Directives

Conforms to the following EC Directives:
- Machinery Directive
- Low Voltage Directive
- EN ISO 14119
- EN 60204-1
- GS-ET-19

### Certified Standards

**Standard type**

<table>
<thead>
<tr>
<th>Certification body</th>
<th>Standard</th>
<th>File No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>TÜV SÜD</td>
<td>EN60947-5-1 (certified direct opening)</td>
<td>Consult your OMRON representative for details.</td>
</tr>
<tr>
<td>UL #1</td>
<td>UL508, CSA C22.2 No.14</td>
<td>E76675</td>
</tr>
<tr>
<td>CQC (CCC)</td>
<td>GB14048.5</td>
<td>2003010305064267</td>
</tr>
<tr>
<td>KOSHA #2</td>
<td>EN60947-5-1</td>
<td>Consult your OMRON representative for details.</td>
</tr>
</tbody>
</table>

*1. Certification for CSA C22.2 No. 14 is authorized by the UL mark.*

*2. Only certain models have been certified.

### Metallic release key type

<table>

</tbody>
</table>

**Note:**

1. The above values are initial values.
2. The Switch contacts can be used with either standard loads or microloads. Once the contacts have been used to switch a load, however, they cannot be used to switch smaller loads. The contact surfaces will become rough once they have been used and contact reliability for smaller loads may be reduced.

#1. The degree of protection is tested using the method specified by the standard (EN60947-5-1). Confirm that sealing properties are sufficient for the operating conditions and environment beforehand. Although the switch box is protected from dust or water penetration, do not use the D4NL in places where foreign material may enter through the key hole on the head, otherwise Switch damage or malfunctioning may occur.

#2. The durability is for an ambient temperature of 5 to 35°C and an ambient humidity of 40% to 70%. For more details, consult your OMRON representative.

#3. Do not pass the 3 A, 250 VAC load through more than 2 circuits.

#4. These figures are minimum requirements for safe operation.

#5. This figure is based on the GS-ET-19 evaluation method.

#6. This value will vary with the switching frequency, environment, and reliability level. Confirm that correct operation is possible with the actual load beforehand.

Constant-current diode

**Circuit Connection Example**

**Connection Example for D4NL-A-F-B**

- Terminals 12 and 41 are connected internally. When connecting inputs to safety circuits, use terminals 11 and 42. (GS-ET-19).
- Connect terminals 21 and 22 and terminals 51 and 52 in series when using as safety-circuit inputs (redundancy circuit for terminals 11 and 12 and terminals 41 and 42 below). Connect the terminals individually when using as auxiliary-circuit inputs (e.g., terminals 21 and 22 for safety-door open/closed monitoring and terminals 51 and 52 for monitoring the lock status).
- In the following connection example, terminals 21 and 22 and terminals 51 and 52 are used as auxiliary-circuit inputs.
- Direct opening contacts used as safety-circuit inputs are indicated with the mark. Terminals 11 and 42, and terminals 21 and 22 have direct opening contacts.
- Connect the indicators in parallel to the auxiliary circuits or terminals E1 and E2 (D4NL-A-B, G-B, B-B, and H-B only).
- Connecting to contacts with direct opening mechanisms may result in short-circuit current flowing if the indicator is destroyed, possibly resulting in incorrect equipment operation.
- Do not switch circuits for two or more standard loads at the same time. Doing so may adversely affect insulation performance.
- DC solenoids have polarity. Confirm terminal polarity before wiring.
## Operation Method

### Operation Principles

<table>
<thead>
<tr>
<th>Mechanical lock models</th>
<th>Mechanical lock models</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operation Key</td>
<td>Solenoid</td>
</tr>
<tr>
<td>OFF</td>
<td>ON</td>
</tr>
<tr>
<td>Spring Lock plate</td>
<td></td>
</tr>
</tbody>
</table>

When the Operation Key is inserted, it is locked by the lock spring. The door will stay locked even if there is a power interruption.

### Solenoid lock models

<table>
<thead>
<tr>
<th>Solenoid lock models</th>
<th>Solenoid lock models</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operation Key</td>
<td>Solenoid</td>
</tr>
<tr>
<td>Plunger</td>
<td>Plunger</td>
</tr>
<tr>
<td>OFF</td>
<td>OFF</td>
</tr>
<tr>
<td>Spring Lock plate</td>
<td>Spring Lock plate</td>
</tr>
</tbody>
</table>

If the solenoid is OFF, the door will not be locked when the Operation Key is inserted. This means that the door can be opened and closed easily when replacing workpieces or parts.

The solenoid is released only when the lock is turned ON.

The door is locked only when the solenoid is turned ON. This means that the door will be unlocked if there is a power interruption and so this model cannot be used in systems that would maintain a hazardous state (e.g., systems requiring toxic gases, high temperatures, or gears that would continue to turn due to inertia).

## Structure and Nomenclature

### Structure

![Diagram of Structure](image)

- Operation key hole: Terminal 42
- Terminal 41: Shorting pin (12-41)
- Terminal 12: Door open/closed detection switch
- Terminal 21: Indicator
- Terminal 02: Lock monitor switch
- Terminal 22: Conduit opening (vertical)
- Terminal 31/33: Terminal 32/34
- Conduit opening (horizontal)
- Release key
- Standard Release Key (Bottom View)
- Special Release Key (Bottom View)
- The head can be mounted in 4 directions.

Note: Terminal numbers vary with the model.
## Contact Form

Indicates conditions where the Key is inserted and the lock is applied. Terminals 12 and 41 are connected internally (as per GS-ET-19).

Dimensions and Operating Characteristics

Switches

**D4NL-xxxx-B**

- Dimensions (Unit: mm)
- Pre-travel distance
- Key insertion force: 15 N max.
- Key extraction force: 30 N max.
- Movement before being locked: 3 mm min.

**D4NL-xxxx-B4**

- Dimensions (Unit: mm)
- Pre-travel distance
- Key insertion force: 15 N max.
- Key extraction force: 30 N max.
- Movement before being locked: 3 mm min.

**Note:**
1. Unless otherwise specified, a tolerance of ±0.4 mm applies to all dimensions.
2. There are fluctuations in the contact ON/OFF timing for Switches with multiple poles (2NC, 2NC/1NO, or 3NC). Confirm performance before application.
Note: 1. Unless otherwise specified, a tolerance of ±0.4 mm applies to all dimensions.
2. There are fluctuations in the contact ON/OFF timing for Switches with multiple poles (2NC, 2NC/1NO, or 3NC). Confirm performance before application.

Operation Keys

D4DS-K1

D4DS-K2

D4DS-K5

Note: Unless otherwise specified, a tolerance of ±0.4 mm applies to all dimensions.
With Operation Key Inserted

**D4NL + D4DS-K1**
(with Front-inserted Operation Key)

- Red
- Black

- Center tolerance of key hole: ±1
- Horizontal insertion radius: \( R \geq 200 \)
- Vertical insertion radius: \( R \geq 200 \)

- Key insertion position: 44 min 46.5 max
- Key hole: (30.5)

**D4NL + D4DS-K1**
(with Top-inserted Operation Key)

- Center tolerance of key hole: ±1
- 49.5 min 52.0 max
- Key insertion position (36)
- Vertical insertion radius: \( R \geq 200 \)

**D4NL + D4DS-K2**
(with Front-inserted Operation Key)

- Red
- Black

- Center tolerance of key hole: ±1
- Horizontal insertion radius: \( R \geq 200 \)
- Vertical insertion radius: \( R \geq 200 \)

- Key insertion position: 40 min 42.5 max
- Key hole: (30.5)

**D4NL + D4DS-K2**
(with Top-inserted Operation Key)

- Center tolerance of key hole: ±1
- 45.5 min 48.0 max
- Key insertion position (36)
- Vertical insertion radius: \( R \geq 200 \)

- Horizontal insertion radius: \( R \geq 200 \)
**D4NL + D4DS-K3**  
(with Front-inserted Operation Key)

- Key insertion position: 45 min 47.5 max
- Horizontal insertion radius: $R \geq 50$
- Vertical insertion radius: $R \geq 200$
- Center tolerance of key hole: ±1

**D4NL + D4DS-K3**  
(with Top-inserted Operation Key)

- Key insertion position: 50.5 min 53.0 max
- Horizontal insertion radius: $R \geq 50$
- Vertical insertion radius: $R \geq 200$
- Center tolerance of key hole: ±1

**D4NL + D4DS-K5**  
(with Front-inserted Operation Key)

- Key insertion position: 51.9 min 54.4 max
- Horizontal insertion radius: $R \geq 50$
- Vertical insertion radius: $R \geq 50$
- Center tolerance of key hole: ±1

**D4NL + D4DS-K5**  
(with Top-inserted Operation Key)

- Key insertion position: 57.4 min 59.9 max
- Horizontal insertion radius: $R \geq 50$
- Vertical insertion radius: $R \geq 50$
- Center tolerance of key hole: ±1
Application Examples

Note: The above PL is only the evaluation result of the example. The PL must be evaluated in an actual application by the customer after confirming the usage conditions.

Application Overview
- The stop signal is sent to the motor controller.
- The power supply to the motor M is turned OFF after OFF-delay time.
- The lock release signal enables the guard to be opened.
- The S1 and S2 monitor the guard, and the power supply to the motor M is kept OFF while the guard is opened.
- The power supply to the motor M is turned ON again when the reset switch S3 is pressed while the guard is closed and locked.

</tbody>
</table>

**Note:** The lock can be released at any time. Therefore, do not use a model with a solenoid lock in applications where the operator may be exposed to danger when the guard opens. Use a model with a mechanical lock.
Safety Precautions

Be sure to read the precautions for All Safety Door Switches in the website at: http://www.ia.omron.com/.

Indication and Meaning for Safe Use

| **DANGER** | Indicates an imminently hazardous situation which, if not avoided, is likely to result in serious injury or may result in death. Additionally there may be severe property damage. |
| **CAUTION** | Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage. |

Precautions for Safe Use

- Supplementary comments on what to do or avoid doing, to use the product safely.

Precautions for Correct Use

- Supplementary comments on what to do or avoid doing, to prevent failure to operate, or undesirable effect on product performance.

**DANGER**

Injury may occasionally occur. Always check to make sure that the safety functions operate correctly before using the machine. The safety functions may not operate correctly because of wiring mistakes, setting mistakes, or Switch malfunction, causing some machines to continue operating in situations where they should be stopped.

Injury may occasionally occur. If the machine is used with the release key in the UNLOCK position, the electromagnetic lock may not operate, causing some machines to continue operating in situations where they should be stopped. Be sure to put the release key in the LOCK position before using the machine. Also, check the condition of the lock and safety circuits.

Injury may occasionally occur. Always ensure that the release key is set to "UNLOCK" or that the Operation Key is inserted before changing the direction of the head. Not doing so may damage the Switch, causing some machines to continue operating in situations where they should be stopped. Refer to "Release Key" on page 16.

Injury may occasionally occur. When the electromagnetic lock function or Switch function is damaged, some machines may continue operating in situations where they should be stopped. Do not use the electromagnetic lock function of the Switch in place of a door lock. Always provide a lock separate from the Switch, attach a warning seal to prevent people from using excessive force to open the door when it is locked, or provide an indicator lamp to show the locked/unlocked status of the door.

**CAUTION**

Electric shock may occasionally occur. Do not use metal connectors or metal conduits.

Precautions for Correct Use

- Supplementary comments on what to do or avoid doing, to prevent failure to operate, or undesirable effect on product performance.

**DANGER**

- Always attach the cover after completing wiring and before using the Switch. Do not supply power when the cover is not attached. Electric shock may occur if the Switch is used without the cover attached.

Installation

- Make sure the Switch is mounted securely to prevent it from falling off. Otherwise injury may result.
- Do not use the Switch as a stopper. Be sure to install a stopper as shown in the following illustration to ensure that the base of the Operation Key does not strike the Head, and adjust the stopper to be within the setting zone (0.5 to 3 mm) of the base of the Operation Key.
- Do not subject the Switch to a shock that exceeds the Switch's shock resistance of 1,000 m/s².

Precautions for Safe Use

**Installation Environment**

- Do not use the Switch submersed in oil or water or in locations continuously subject to splashes of oil or water. Doing so may result in oil or water entering the Switch. (The IP67 degree of protection of the Switch specifies the amount of water penetration after the Switch is submerged in water for a certain period of time.)

**Wiring**

- Do not switch circuits for two or more standard loads (250 VAC, 3 A). Doing so may adversely affect insulation performance.
Solenoid Lock Models
The solenoid lock locks the door only when power is supplied to the solenoid. Therefore, the door will be unlocked if the power supply to the solenoid stops. Therefore, do not use solenoid lock models for machines that may be operating and dangerous even after the machine stops operating.

Mounting
Appropriate Tightening Torque
- Be sure to tighten each screw of the Switch properly. Loose screws may result in malfunction.

<table>
<thead>
<tr>
<th>Type</th>
<th>Appropriate tightening torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terminal screw</td>
<td>0.59 to 0.78 N·m</td>
</tr>
<tr>
<td>Cover mounting screw</td>
<td>0.49 to 0.69 N·m</td>
</tr>
<tr>
<td>Head mounting screw</td>
<td>0.49 to 0.59 N·m</td>
</tr>
<tr>
<td>Operation Key mounting screw</td>
<td>2.35 to 2.75 N·m</td>
</tr>
<tr>
<td>Switch mounting screw</td>
<td>0.49 to 0.69 N·m</td>
</tr>
<tr>
<td>Connector</td>
<td>1.77 to 2.16 N·m</td>
</tr>
<tr>
<td>Cap screw</td>
<td>1.27 to 1.67 N·m</td>
</tr>
</tbody>
</table>

- When loosening a screw with an electrical screwdriver or similar tool while pressing down on the screw head, do not continue turning the screw past the point where the threads disengage. Doing so may strip the end of the threads.

Switch and Operation Key Mounting
- Use M4 screws and washers to mount the Switch and Operation Key, and tighten the screws to a suitable torque. To ensure safety, use screws that cannot be easily removed or another means to prevent the Switch and Operation Key from easily being removed.

Mounting Holes for Switches
![Mounting Holes for Switches Diagram]

- If the Switch is back-mounted, the release key can be operated only from the bottom and the indicator cannot be used.
- Ensure that the alignment offset between the Operation Key and the key hole does not exceed ±1 mm. If the Operation Key is offset or at an angle, accelerated wear or damage to the Switch may result.
- Observe the specified insertion radius for the Operation Key and insert it in a direction perpendicular to the key hole.
- Do not impose excessive force on the Operation Key while the Key is inserted into the Switch or drop the Switch with the Operation Key inserted. Doing either of these may deform the Key or break the Switch.

Head Direction
- Remove the four screws of the head to enable changing the mounting direction of the head. The head can be mounted in four directions. Ensure that no foreign material enters the interior of the Switch.
- Do not change the head direction with the cover removed.
- Do not insert or remove the Operation Key with the Switch head removed. Doing so may make it impossible to insert the Operation Key.

Attaching a Cover
- When attaching a cover, be sure that the seal rubber is in place and that there is no foreign material present. If the cover is attached with the seal rubber out of place or if foreign material is stuck to the rubber, a proper seal will not be obtained.
- Do not use any screws to connect the cover other than the specified ones. The seal characteristics may be reduced.

Securing the Door
When the door is closed (with the Operation Key inserted), the Operation Key may exceed the set zone because of, for example, the door's own weight, machine vibration, or the door cushion rubber. Then, when an attempt is made to open the door, it may result in damage or malfunction. Also, it may not be possible to unlock the Switch if there is weight placed on the Operation Key. Do not rely on the Switch to substitute for a door locking device. Secure the door with a stopper so that the Operation Key remains within the set zone.

Solenoid
- The solenoid will heat when it carries current. Do not touch it.
- A DC solenoid has polarity. Confirm terminal polarity before wiring it.

Wiring
Circuit Connection Example for the D4NL-C□□□□□□□□-B
- Direct opening contacts used as safety-circuit inputs are indicated with the ◯ mark. Terminals 11 and 42, and terminals 21 and 22 have direct opening contacts.
- Connect terminals 21 and 22 and terminals 51 and 52 in series when using as safety-circuit inputs (redundancy circuit for terminals 11 and 12 and terminals 41 and 42 below). Connect the terminals individually when using as auxiliary-circuit inputs (e.g., terminals 21 and 22 for safety-door open/closed monitoring and terminals 51 and 52 for monitoring the lock status).
- In the following connection example, terminals 21 and 22 and terminals 51 and 52 are used as auxiliary-circuit inputs.
- Connect the indicators in parallel to the auxiliary circuits or terminals E1 and E2 (D4NL-□□□□□□□□-B, □□□□□□□□-B, and □□□□□□□□-B only).

Connecting to contacts with direct opening mechanisms may result in short-circuit current flowing if the indicator is destroyed, possibly resulting in incorrect equipment operation.
Wiring Precautions

- Do not wire the Switch while power is being supplied. Doing so may result in electric shock.
- Do not let particles, such as small pieces of lead wire, enter the switch body when wiring.
- When connecting to the terminals via insulating tube and M3.5 crimp terminals, cross the crimp terminals as shown above so that they do not rise up onto the case or the cover.
- Applicable lead wire size: AWG20 to AWG18 (0.5 to 0.75 mm²). Use lead wires of an appropriate length. Not doing so may result in excess length causing the cover to rise and not fit properly.
- Do not push crimp terminals into gaps in the case interior. Doing so may cause damage or deformation of the case.
- Use terminals having the thickness of 0.5 mm or less to avoid the contact between the terminal and the interior of the Switch case.

[Reference] The terminals listed below have thickness of 0.5 mm or less.

<table>
<thead>
<tr>
<th>Manufacturer</th>

</tr>
</tbody>
</table>

Recommended Connectors

- Use a connector with a screw section not exceeding 11 mm. Otherwise, the screws will protrude into the case interior. The connectors given in the following table have connectors with screw sections not exceeding 11 mm.

Use the following connectors to ensure conformance to IP67.

<table>
<thead>

</table>

Use LAPP connectors together with Seal Packing (JPK-16, GP-13.5, or GPM20), and tighten to the applicable torque. Seal Packing is sold separately.
- LAPP is a German manufacturer.
- OHM Electric Co. is a Japanese manufacturer.

Processing the Conduit Opening

- Connect a recommended connector to the opening of the conduit and tighten the connector to the proper torque. The case may be damaged if excessive tightening torque is applied.
- Make sure that the outer diameter of the cable connected to the connector is correct.
- Attach a conduit cap to the unused conduit opening when wiring and tighten it to a suitable torque. The conduit cap is provided with the Switch.
Terms and Conditions of Sale

1. Offer, Acceptance. These terms and conditions (these "Terms") are deemed part of any order, purchase, sales, purchase orders, invoices, confirmations, acknowledgments, catalogs, manuals, brochures and other documents, whether electronic or in written form, unless other terms are expressly agreed to in writing by Omron Electronics LLC and its subsidiary companies ("Omron"). Omron objects to any terms or conditions proposed in Buyer's purchase order or other documents which are inconsistent with, or in addition to, these Terms.

2. Prices, Payment Terms. All prices stated are current, subject to change with- out notice, and are exclusive of taxes. Omron reserves the right to increase or decrease prices on any unshipped portions of outstanding orders. Payments for Products are due net 30 days unless otherwise stated in the invoice.

3. Delivery. Customer may not return Products, and may not change delivery dates, without Omron's written consent. If any applicable price is a result of a negotiated price or is altered after the order is placed, Omron shall not be liable for any delay or failure in delivery resulting therefrom.

4. Interest. Omron, at its option, may charge Buyer 1-1/2% interest per month or part thereof, on any unpaid amounts, including amounts payable hereunder, whether or not then due, which are owing to it by Buyer. Buyer shall in any event remain liable for all unpaid accounts.

5. Financial. If the financial position of Buyer at any time becomes unsatisfactory to Omron, Omron reserves the right to stop shipments or require satisfactory security for future shipments. If Buyer fails to make payment when due, or to comply with these Terms or any agreement related to Omron may (without liability and in addition to other remedies) cancel any unshipped portion of Prod- ucts and stop delivery to Buyer. Omron may pay all amounts, including amounts payable hereunder, whether or not then due, which are owing to it by Buyer. Buyer shall in any event remain liable for all unpaid accounts.

6. Cancellation, Etc. Orders are subject to rescheduling or cancellation without notice, whether Buyer indemnifies Omron against all related costs or expenses. Buyer shall be responsible for all costs involved in, obtaining any government approvals required for the importation or sale of the Products.

7. Taxes. All taxes, duties and other governmental charges (other than general real property and income taxes), including any interest or penalties thereon, imposed directly or indirectly on Omron or required to be collected directly or indirectly by Omron for the manufacture, production, sale, delivery, importation, exportation or use of any Products sold hereunder, including customs duties and sales, excise, use, turnover and license taxes shall be charged to and remitted by Buyer to Omron.

8. Financial. If the financial position of Buyer at any time becomes unsatisfactory to Omron, Omron reserves the right to stop shipments or require satisfactory security for future shipments. If Buyer fails to make payment when due, or to comply with these Terms or any agreement related to Omron may (without liability and in addition to other remedies) cancel any unshipped portion of Prod- ucts and stop delivery to Buyer. Omron may pay all amounts, including amounts payable hereunder, whether or not then due, which are owing to it by Buyer. Buyer shall in any event remain liable for all unpaid accounts.

9. Cancellation, Etc. Orders are subject to rescheduling or cancellation without notice, whether Buyer indemnifies Omron against all related costs or expenses. Buyer shall be responsible for all costs involved in, obtaining any government approvals required for the importation or sale of the Products.

10. Force Majeure. Omron shall not be liable for any delay in delivery resulting from causes beyond its control, including fires, floods, strikes or other labor disputes, shortage of labor or materials, accidents to machinery, acts of sabotage, riots, delay in or lack of transportation or the requirements of any government authority.

11. Shipping, Delivery. Unless otherwise expressly agreed in writing by Omron:
   a. Shipments shall be by a carrier selected by Omron; Omron will not drop ship Products in "break bulk" shipments.
   b. Such carrier shall act as the agent of Buyer and delivery to such carrier shall constitute delivery to Buyer;
   c. All sales and shipments of Products shall be FOB shipping point (unless otherwise stated in writing by Buyer), at which point title and risk of loss shall pass from Omron to Buyer; provided that Omron shall retain a security interest in the Products until the full purchase price is paid;
   d. Delivery and shipping dates are estimates only; and
   e. Omron will package Products as it deems proper for protection against normal handling and extra charges apply to special conditions.

12. Change in Specifications. Buyer shall notify Omron of any change in Specifications or design of any Product. Omron may revise the Specifications at any time without notice to Buyer. Buyer shall be responsible for all costs involved in, obtaining any government approvals required for the importation or sale of the Products occurring before delivery to the carrier must be presented in writing, relating to the sale of products or services (collectively, the "Products") sold by Omron to Buyer, and Buyer shall limit distribution thereof to its trusted employees and strictly prevent disclosure to any third party.

13. Property; Confidentiality. Any intellectual property in the Products is the exclu- sive property of Omron unless otherwise expressly agreed in writing by Omron to Buyer relating to the Products are confidential and proprietary, and Buyer shall limit distribution thereof to its trusted employees and strictly prevent disclosure to any third party.

14. Export Controls. Buyer shall comply with all applicable laws, regulations and licences regarding (i) export of products or information; (ii) sale of Products to "forbidden" or other proscribed persons; and (iii) disclosure to non-citizens of products or technology.

15. Miscellaneous. (a) Waiver. No failure or delay by Omron in exercising any right and no course of dealing between Buyer and Omron shall operate as a waiver of rights by Omron. (b) Assignment. Buyer may assign its rights hereunder without Omron's written consent. (c) Law. These Terms are governed by the law of the jurisdiction of the home office of the Omron company from which Buyer is purchasing the Products. Any claim arising from or relating to the sale of Products, whether based on contract, warranty, negligence or strict liability, shall be governed by the law of the jurisdiction of the home office of the Omron company from which Buyer is purchasing the Products. (d) Amendment. These Terms constitute the entire agreement between Buyer and Omron relating to the Products and supersede any oral or written representations or agreements and any prior written or oral communications between Buyer and Omron relating to the Products. (e) Severability. If any provision hereof is rendered ineffective or invalid, such provision shall not invalidate any other provision. (f) Severability. If any provision hereof shall have the effect of excluding or waiving a claim against the amount owing in respect of this invoice, (g) Definitions. As used herein, "including" means including without limitation; and "or" is alleged to arise from Buyer's acts or omissions under these Terms or in any way with respect to the Products. Without limiting the foregoing, Buyer (at its own expense) shall indemnify and hold harmless Omron and defend or sett- le any action brought against such Companies to the extent based on a claim that any Product made to Buyer specifications infringed intellectual property rights of any party other than Omron.

Certain Precautions on Specifications and Use

1. Suitability of Use. Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying recognized limits and limitations of use. Any advice, recommendations or information given orally or in writing, whether in response to a question or requested by Buyer, is for information only and does not constitute a warranty. It may represent the result of Omron's experience and does not constitute a warranty. It may represent the result of Omron's experience and does not constitute a warranty.

2. Programmable Products. Omron Companies shall not be responsible for the suitability of use of any Product when it is programmed with non- Omron origin code or design, or for the results of the use of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right, (c) Buyer Remedy. Omron's sole obli- gation hereunder shall be Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repaid or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsi- ble for any warranty, repair, replacement, or indemnity expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Compa- nies shall not be liable for any loss, loss of life or property or in large quantities without further notice.

3. Performance Data. Performance data in the Products occurring before delivery to the carrier must be presented in writing, relating to the sale of products or services (collectively, the "Products") sold by Omron to Buyer, and Buyer shall limit distribution thereof to its trusted employees and strictly prevent disclosure to any third party.

4. Change in Specifications. Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our prac- tice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifica- tions of the Product may be changed without any notice. When in doubt, spe- cial part numbers may be assigned to fix or establish key specifications for your application. Please contact your Omron representative for further details to confirm actual specifications of purchased Product.

5. Errors and Omissions. Information provided by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

Authorized Distributor:

Automation Control Systems
- Machine Automation Controllers (MAC) • Programmable Controllers (PLC)
- Operator interfaces (HMI) • Distributed I/O • Software

Drives & Motion Controls
- Servo & AC Drives • Motion Controllers & Encoders

Temperature & Process Controllers
- Single and Multi-loop Controllers

Sensors & Vision
- Proximity Sensors • Photoelectric Sensors • Fiber-Optic Sensors
- Amplified Photomicrosensors • Measurement Sensors
- Ultrasonic Sensors • Vision Sensors

Industrial Components
- RFID/Code Readers • Relays • Pushbuttons & Indicators
- Limit and Basic Switches • Timers • Counters • Metering Devices
- Power Supplies

Safety
- Laser Scanners • Safety Mats • Edges and Bumpers • Programmable Safety Controllers • Light Curtains • Safety Relays • Safety Interlock Switches
