# 2. Terms and Definitions

<table>
<thead>
<tr>
<th>Term</th>
<th>Explanation and Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tag data link</td>
<td>A function that enables cyclic tag data exchanges on an EtherNet/IP network between PLCs or between PLCs and with other devices without using a user program in the PLCs.</td>
</tr>
<tr>
<td>Tag</td>
<td>A tag is a unit that is used to exchange data with tag data links. Data is exchanged between the local network variables and remote network variables specified in the tags or between specified I/O memory areas.</td>
</tr>
<tr>
<td>Tag set</td>
<td>When a connection is established, from 1 to 8 tags (including Controller status) is configured as a tag set. Each tag set represents the data that is linked for a tag data link connection.</td>
</tr>
<tr>
<td>Connection</td>
<td>A connection is used to exchange data as a unit within which data synchronicity is maintained. Thus, data synchronicity is maintained for all the data exchanged for the tags in one data set.</td>
</tr>
<tr>
<td>Originator and Target</td>
<td>To perform tag data links, one node requests the opening of a communications line called “connection” to perform tag data links. The node that requests opening the connection is called “originator”, and the node that receives the request is called “target”.</td>
</tr>
<tr>
<td>Node</td>
<td>With EtherNet/IP network, 1 node is 1 EtherNet/IP port.</td>
</tr>
<tr>
<td>Tag data link parameter</td>
<td>The tag data link parameter is the setting data to perform the tag data link. It includes the data to set tags, tag sets, and connections.</td>
</tr>
<tr>
<td>EDS file</td>
<td>A file that contains the I/O points of EtherNet/IP devices and the parameters that can be set via EtherNet/IP.</td>
</tr>
</tbody>
</table>
3. Remarks

(1) Understand the specifications of devices which are used in the system. Allow some margin for ratings and performance. Provide safety measures, such as installing safety circuit in order to ensure safety and minimize risks of abnormal occurrence.

(2) To ensure system safety, always read and heed the information provided in all Safety Precautions, Precautions for Safe Use, and Precaution for Correct Use of manuals for each device used in the system.

(3) The users are encouraged to confirm the standards and regulations that the system must conform to.

(4) It is prohibited to copy, to reproduce, and to distribute a part of or whole part of this document without the permission of OMRON Corporation.

(5) This document provides the latest information as of April 2013. The information on this manual is subject to change without notice for improvement.
The following notation is used in this document.

![WARNING]
---
Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. Additionally, there may be severe property damage.

![Caution]
---
Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury, or property damage.

### Precautions for Safe Use
Precautions on what to do and what not to do to ensure safe usage of the product.

### Precautions for Correct Use
Precautions on what to do and what not to do to ensure proper operation and performance.

### Additional Information
Additional information to read as required.
This information is provided to increase understanding or make operation easier.

### Symbols

The triangle symbol indicates precautions (including warnings). The specific operation is shown in the triangle and explained in text. This example indicates a general precaution.
4. Overview

This document describes the procedure to connect the Displacement Sensor (ZW series) of OMRON Corporation (hereinafter referred to as OMRON) with CJ-series Programmable Controller + Ethernet/IP Unit (hereinafter referred to as the PLC), and the procedure to check their connection.

Refer to Section 6. Connection Procedure to understand the setting method and key points to connect the devices via EtherNet I/P.

In this document, CJ-series EtherNet/IP Unit and the built-in EtherNet/IP port of CJ-series CJ2 CPU Unit are collectively called as the "EtherNet/IP Unit".
5. Applicable Devices and Support Software

5.1. Applicable Devices

The applicable devices are as follows:

<table>
<thead>
<tr>
<th>Manufacturer</th>
<th>Name</th>
<th>Model</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

Additional Information

As applicable devices above, the devices with the models and versions listed in Section 5.2. are actually used in this document to describe the procedure for connecting devices and checking the connection.

You cannot use devices with versions lower than the versions listed in Section 5.2.

To use the above devices with versions not listed in Section 5.2 or versions higher than those listed in Section 5.2, check the differences in the specifications by referring to the manuals before operating the devices.

Additional Information

This document describes the procedure to establish the network connection. Except for the connection procedure, it does not provide information on operation, installation or wiring method. It also does not describe the functionality or operation of the devices. Refer to the manuals or contact your OMRON representative.
5. Applicable Devices and Support Software

5.2. Device Configuration

The hardware components to reproduce the connection procedure of this document are as follows:

- **Personal computer** (CX-One installed)  
  OS: Windows 7

- **CJ2M-CPU32**  
  (Built-in EtherNet/IP port)

- **Switching Hub**  
  (W4S1-05C)

- **ZW-S40**  
  (Industrial Ethernet cable)

- **Calibration ROM**  
  ZW-CE10

### Manufacturer Name | Model | Version
---|---|---
OMRON CPU Unit (Built-in EtherNet/IP port) | CJ2M-CPU32 (with built-in CJ2M-EIP21) | Ver.2.0 (Ver.2.1)
OMRON Power Supply Unit | CJ1W-PA202 |  
OMRON Switching Hub | W4S1-05C | Ver.1.0
OMRON CX-One | CXONE-AL[][]C-V4/AL[][]D-V4 | Ver.4.[]
OMRON CX-Programmer (Included in CX-One.) | Ver.9.41
OMRON Network Configurator (Included in CX-One.) | Ver.3.55
- Personal computer (OS: Windows 7) | - | 
- USB cable | - | 
OMRON Ethernet cable (with industrial Ethernet connector) | XS5W-T421-[]M[]-K | 
OMRON Displacement Sensor Controller | ZW-CE10 | Ver.1.110
OMRON Displacement Sensor Head | ZW-S40 |  
OMRON Calibration ROM (Included with Sensor Head.) |  
OMRON Recommended power supply: 24VDC 2.5A 60W | S8VS-06024 | 

**Precautions for Correct Use**

Update the CX-Programmer and Network Configurator to the versions specified in this section or higher versions using the auto update function.

If a version not specified in this section is used, the procedures described in Section 6 and subsequent sections may not be applicable. In that case, use the equivalent procedures described in the CX-Programmer Operation Manual (Cat. No. W446) and Network Configurator Online Help.
Additional Information

The system configuration in this document uses USB for the connection between the personal computer and PLC. When installing the USB driver, please refer to A-5 Installing the USB Driver in the CJ-series CJ2 CPU Unit Hardware User’s Manual (Cat. No. W472).
6. EtherNet/IP Connection Procedure

This section explains the procedure for connecting the Displacement Sensor to the PLC via EtherNet/IP.

6.1. EtherNet/IP Communications Settings

The settings shown in the table below are used to explain the procedure for connecting the PLC.

This document explains the procedure for setting up the PLC and Displacement Sensor from the factory default setting. For the initialization, refer to Section 7 Initialization Method.

6.1.1. Settings

The settings of the PLC (EtherNet/IP Unit) and the Displacement Sensor are as follows:

<table>
<thead>
<tr>
<th></th>
<th>PLC (EtherNet/IP Unit) (node 1)</th>
<th>Displacement Sensor (node 2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit number</td>
<td>0</td>
<td>-</td>
</tr>
<tr>
<td>Node address</td>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>IP address</td>
<td>192.168.250.1</td>
<td>192.168.250.2</td>
</tr>
<tr>
<td>Subnet mask</td>
<td>255.255.255.0</td>
<td>255.255.255.0 (default)</td>
</tr>
<tr>
<td>MEMLNK (Memory link function)</td>
<td>-</td>
<td>EIP (EtherNet/IP)</td>
</tr>
</tbody>
</table>
6. EtherNet/IP Connection Procedure

6.1.2. Tag Data Link Allocation

The tag data link allocation of the Displacement Sensor is as follows:

<table>
<thead>
<tr>
<th>Output area</th>
<th>Input area</th>
</tr>
</thead>
<tbody>
<tr>
<td>D10000 (PLC → Displacement Sensor)</td>
<td>D10100 (Displacement Sensor → PLC)</td>

*1: Sensor head common status signal
*2: Sensor head 1 status signal
*3: Sensor head 2 status signal (Reserved)

**Additional Information**

For details on the command codes and response codes, refer to 6-3 Ethernet/IP Connection under Chapter 6 Communications with External Devices in the ZW Series Displacement Sensor (Confocal Fiber Type) User's Manual (Cat. No. Z332).
6.2. Work Flow

Take the following steps to set the tag data link for EtherNet/IP.

**6.3 Setting Up the Displacement Sensor**

6.3.1 Parameter Settings

Set up the Displacement Sensor.

Set the parameters for the Displacement Sensor.

**6.4 Setting Up the PLC**

6.4.1 Hardware Settings

Set up the PLC.

Set the hardware switches on the EtherNet/IP Unit.

6.4.2 Starting the CX-Programmer and Connecting Online with PLC

Start the CX-Programmer and connect online with the PLC.

Create the I/O table for the PLC and set the IP address.

6.4.3 Creating the I/O Table and Setting the IP Address

Start the Network Configurator and upload the network configuration.

Register the tags of the send area and receive area.

6.4.4 Starting the Network Configurator and Uploading the Configuration

Associate the tags of the target device with the tags of the originator.

Transfer the set tag data link parameters to the PLC.

6.4.5 Setting Tags

Confirm that the EtherNet/IP communications are performed normally.

6.4.6 Setting Connections

Check the connection status of EtherNet/IP.

6.4.7. Transferring the Tag Data Link Parameters

Confirm that correct data are sent and received.

6.5 Checking the EtherNet/IP Communications

6.5.1 Checking the Connection Status

6.5.2 Checking Data that are Sent and Received
6.3. Setting Up the Displacement Sensor

Set up the Displacement Sensor.

6.3.1. Parameter Settings

Set the parameters for the Displacement Sensor.

1. Check the keys and display used to set parameters for the Displacement Sensor.
   - Connect the Controller to the Sensor Head and connect the Calibration ROM.
   - Connect the Ethernet cable.
   - Turn ON the power supply to the Displacement Sensor.

2. After the startup screen is displayed, the RUN mode screen is displayed. The RUN indicator is lit as shown on the right. Hold down the Mode switching Key for two seconds.

3. A confirmation screen for mode switching is displayed. Press the ZERO/SET Key.

Press the ZERO/SET Key once.
6. EtherNet/IP Connection Procedure

4 The RUN mode screen is displayed. The RUN indicator is not lit as shown on the right.

Press → (RIGHT) Key or ← (LEFT) Key to change the main display content from SENS to SYSTEM.

Press the ZERO/SET Key.

5 SAVE is displayed on the main display.

Press → (RIGHT) Key or ← (LEFT) Key and change the main display content from SAVE to COM.

Press the ZERO/SET Key.

Press the → (RIGHT) Key or ← (LEFT) Key once.

Press the ZERO/SET Key once.
6. EtherNet/IP Connection Procedure

6 RS232C is displayed on the main display.

Press the → (RIGHT) Key and change the main display content from RS232C to ETN.

Press the ZERO/SET Key.

7 IPADDR is displayed on the main display.

Press the ZERO/SET Key once.

8 IP1 is displayed on the main display.

Press the ZERO/SET Key.

Confirm that 192 is displayed on the sub-display.
*If the setting value is different, change the value by referring to step 11 and step 12.
*In this step, you set 192 that is the first octet of IP address 192.168.250.2.

Press the ZERORST/ESC Key once. The first screen in this step is displayed again.

Press the → (RIGHT) Key once.

IP1 is displayed.

Press the ZERORST/ESC Key once.

Press the → (RIGHT) Key once.
<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
</table>
| 9    | IP2 is displayed on the main display.  
Press the **ZERO/SET** Key.  
Confirm that 168 is displayed on the sub-display.  
*If the setting value is different, change the value by referring to step 11 and step 12.  
*In this step, you set 168 that is the second octet of IP address 192.168.250.2.  
Press the **ZERORST/ESC** Key once. The first screen in this step is displayed again.  
Press the → (RIGHT) Key once.  
Press the **ZERO/SET** Key once.  
Press the **ZERORST/ESC** Key once.  
IP2 is displayed.  
Press the → (RIGHT) Key once. |
| 10   | IP3 is displayed on the main display.  
Press the **ZERO/SET** Key.  
Confirm that 250 is displayed on the sub-display.  
*If the setting value is different, change the value by referring to step 11 and step 12.  
*In this step, you set 250 that is the third octet of IP address 192.168.250.2.  
Press the **ZERORST/ESC** Key once. The first screen in this step is displayed again.  
Press the → (RIGHT) Key once.  
Press the **ZERO/SET** Key once.  
Press the **ZERORST/ESC** Key once.  
IP3 is displayed.  
Press the → (RIGHT) Key once. |
6. EtherNet/IP Connection Procedure

11 IP4 is displayed on the main display.

Press the ZERO/SET Key.

The default value is displayed on the sub-display.

Press the ZERO/SET Key.

The sub-display content changes and you can change the values.
Select a digit whose value you want to change by pressing the → (RIGHT) or ← (LEFT) Key.
You can change the value of a blinking digit.
Change the value by pressing the ↑ (UP) or ↓ (DOWN) Key.
Change to 000002.

Press the ZERO/SET Key once.

Press the → (RIGHT) or ← (LEFT) Key.
Press the ↑ (UP) or ↓ (DOWN) Key.

12 000002 is displayed on the sub-display.

Press the ZERO/SET Key.

2 is displayed on the sub-display.

*In this step, you set 2 that is the fourth octet of IP address 192.168.250.2.

Press ZERORST/ESC Key once. The first screen in step 11 is displayed again.

Press the ZERORST/ESC Key once.

IP4 is displayed.

Press the ZERORST/ESC Key once.
<table>
<thead>
<tr>

| 18   | A confirmation screen for mode switching is displayed.  
Press the **ZERO/SET** Key.  
The save confirmation screen is displayed.  
Press the **ZERO/SET** Key.  
The RUN mode screen is displayed.  
Press the **ZERO/SET** Key once. |
| 19   | Cycle the power supply to the Displacement Sensor.  
*The new settings will take effect after restarting.* |
6. EtherNet/IP Connection Procedure

6.4. Setting Up the PLC

Set up the PLC.

6.4.1. Hardware Settings

Set the hardware switches on the EtherNet/IP Unit.

Precautions for Correct Use

Make sure that the power supply is OFF when you perform the setting up.

1. Make sure that the PLC power is OFF.

*If the power supply is turned ON, the following procedure may not be applicable.

2. Refer to the right figure and check the hardware switches located on the front panel of the EtherNet/IP Unit.

3. Set the Unit number setting switch to 0.

The unit number is used to identify individual CPU Bus Units when more than one CPU Bus Unit is mounted to the same PLC. Use a small screwdriver to make the setting, taking care not to damage the rotary switch. The unit number is factory-set to 0.

4. Set the node address setting switches to the following default values.

   [NODE No.x16^1]: 0
   [NODE No.x16^0]: 1

*Set the IP address to 192.168.250.1.

*By default, the upper three octets are fixed to 192.168.250, and the values set with the node address setting switches are the fourth octet of the local IP address.

With the FINS communications service, when there are multiple EtherNet/IP Units connected to the Ethernet network, the EtherNet/IP Units are identified by node addresses. Use the node address switches to set the node address between 01 and FE hexadecimal (1 to 254 decimal). Do not set a number that has already been set for another node on the same network.

The left switch sets the sixteens digit (most significant digit) and the right switch sets the ones digit (least significant digit). The node address is factory-set to 01.

Default IP address = 192.168.250.node address

With the factory-default node address setting of 01, the default IP address is 192.168.250.1.
<p>| | |</p>
<table>
<thead>
<tr>

</table>
| **6** | Turn ON the power supply to the PLC.  
   The set IP address is displayed on the seven-segment LED indicators from right to left. Afterwards, the rightmost 8 bits of the IP address are displayed in hexadecimal during normal operation. |
6.4.2. Starting the CX-Programmer and Connecting Online with PLC

Start the CX-Programmer and connect online with the PLC.

Install the CX-One and USB driver in the personal computer beforehand.

1. Start the CX-Programmer.

2. Select Auto Online - Direct Online from the PLC Menu.

3. The Direct Online Dialog Box is displayed. Select the USB Connection Option for the Connection Type and click the Connect Button.
6. EtherNet/IP Connection Procedure

<table>
<thead>
<tr>
<th>Step</th>

</tr>
</tbody>
</table>
| 6    | Confirm that the CX-Programmer and the PLC are connected online.  
  *The icon is shown during online connection. |

**Additional Information**

If the CX-Programmer and PLC are not connected online, please check the connection of the cable. Or, return to step 2, check the settings and perform each step again.  
Refer to **Connecting Directly to a CJ2 CPU Unit Using a USB Cable** in Chapter 3 *Communications* in PART 3: CX-Server Runtime of the CX-Programmer Operation Manual (Cat. No. W466) for details.

**Additional Information**

The dialogs explained in the following procedures may not be displayed depending on the environmental setting of CX-Programmer.  
For details on the environmental setting, refer to **Options and Preferences** in Chapter 3 *Project Reference* in PART 1: CX-Programmer of the CX-Programmer Operation Manual (Cat. No. W466).  
This document explains the setting procedure when the setting item "Confirm all operations affecting the PLC" is selected.
6.4.3. Creating the I/O Table and Setting the IP Address

Create the I/O table for the PLC and set the IP address.

1. If the operating mode of the PLC is RUN Mode or Monitor Mode, change it to Program Mode by following steps (1) to (3).

   (1) Select **Operating Mode - Program** from the PLC Menu of CX-Programmer.

   (2) The dialog box on the right is displayed. Click the **Yes** Button.

   *Refer to Additional Information on the previous page for the settings concerning the dialog display.

   (3) Confirm that Stop/Program Mode is shown on the right side of the PLC model in the Project Workspace of CX-Programmer.
2. Select **Edit - I/O Table and Unit Setup** from the PLC Menu of the CX-Programmer.

The PLC IO Table Window is displayed.

3. Select **Create** from the Options Menu of the PLC IO Table Window.

The dialog box on the right is displayed. Click the **Yes** Button.

The dialog box on the right is displayed. Click the **Yes** Button.
4 The Transfer from PLC Dialog Box is displayed. Select the I/O Table Check Box and the SIO Unit Parameters Check Box, and click the Transfer Button.

When the transfer is completed, Transfer Results Dialog Box is displayed. Read the message in the dialog box and confirm that the transfer was normally executed.

When the I/O table is created normally, the dialog box shows the following:
Transfer Success: 1 Unit
Transfer Unsuccessful: 0 Unit

Click the OK Button.

5 On the PLC IO Table Window, click + to the left of Built-in Port/Inner Board to display CJ2M-EIP21.

*The right figure displays the CPU Unit (built-in EtherNet/IP port) specified in 5.2. Device Configuration. When you use an EtherNet/IP Unit not specified in 5.1. Applicable Devices, the display position and name are different from this figure.

Right-click CJ2M-EIP21 and select Unit Setup.
6. EtherNet/IP Connection Procedure

The Edit Parameters Dialog is displayed. Select the TCP/IP Tab.
Make the following settings in the IP Address Field.
• Use the following address: Select
  • IP address: 192.168.250.1
  • Subnet mask: 255.255.255.0

Click the **Transfer [PC to Unit]** Button.

7

The dialog box on the right is displayed. Click the **Yes** Button.

Confirm that parameters were normally transferred to the Unit, and click the **OK** Button.
6. EtherNet/IP Connection Procedure

8 The right dialog box is displayed. Click the Yes Button. When the unit is restarted, the dialog box on the right is displayed. Click the OK Button.

9 To confirm that the IP address was correctly changed, click the Compare Button.

10 After confirming that parameters match, select the Close Button.
On the Edit Parameters Dialog Box, click the OK Button.
6. EtherNet/IP Connection Procedure

6.4.4. Starting the Network Configurator and Uploading the Configuration

Start the Network Configurator and upload the network configuration.

 Preconditions for Correct Use

Please confirm that the LAN cable is connected before performing the following procedures. When it is not connected, turn OFF the power supply to each device and then connect the LAN cable.

1. Right-click CJ2M-EIP21 on the PLC IO Table Window, and select **Start Special Application - Start with Settings Inherited**.

   The Select Special Application Dialog Box is displayed. Select Network Configurator and click the **OK** Button.

2. Network Configurator is started.

3. Select **Connect** from the Network Menu.
4. EtherNet/IP Connection Procedure

The Setup Interface Dialog Box is displayed. Confirm that the following settings are made.
- Port Type: USB
- Port: OMRO
- Baud Rate: 115200 Bit/s

Click the OK Button.

5. The Select Connect Network Port Dialog Box is displayed.
Select **Back Plane - CJ2M-EIP21 - TCP:2**, and click the OK Button.

6. The Select Connected Network Dialog Box is displayed. Click the OK Button.

Additional Information

If the CX-Programmer and PLC are not connected online, please check the connection of the cable. Or, return to step 1, check the settings and try each step again.

For details, refer to 6-2-9 Connecting the Network Configurator to the Network in Section 6 Tag Data Link Functions of the EtherNet/IP Unit Operation Manual (Cat. No. W465).
When an online connection is established normally, the color of the icon on the figure changes to blue.

Select **Upload** from the Network Menu to read the device information on the network.

The dialog box on the right is displayed. Click the **Yes** Button.

The Target Device Dialog Box is displayed. Select the 192.168.250.1 Checkbox and the 192.168.250.2 Checkbox, and click the **OK** Button.

*If 192.168.250.1 or 192.168.250.2 is not displayed on the dialog box, click the Add Button to add the address.

*The displayed addresses depend on the status of the Network Configurator.

The device parameters are uploaded. When uploading is completed, the dialog box on the right is displayed. Click the **OK** Button.
After uploading is completed, confirm that the Network Configuration Pane shows the updated IP addresses of the devices.

IP address of node 1: 192.168.250.1
IP address of node 2: 192.168.250.2
6.4.5. Setting Tags

Register the tags of the receive area and send area.

This section explains the receive settings and then send settings of the target node.

1. On the Network Configuration Pane of the Network Configurator, right-click the node 1 device and select Parameter → Edit.

2. The Edit Device Parameters dialog is displayed. Select the Tag Sets tab.

3. The data on the Tag Sets Tab is displayed. Select the In-Consume Tab and click the Edit Tags.

Here, register an area (node 2 → node 1) where node 1 consumes data.
4. EtherNet/IP Connection Procedure

The Edit Tags Dialog Box is displayed. Select the In-Consumed Tab and click the New Button. Here, register an area (node 2 → node 1) where node 1 consumes data.

5. EtherNet/IP Connection Procedure

The Edit Tag Dialog Box is displayed. Enter the following values in the parameters.
• Name: D10100 (Start address of the input data to node 1)
• Size: 56 (bytes)

After entering, click the Register Button.
6. EtherNet/IP Connection Procedure

6. The Edit Tag Dialog Box is displayed. Click the Close Button.

7. Select the Out - Produce Tab and click the New Button. Here, register the send data of node 1. (Data sent from node 1 to node 2).
The Edit Tag Dialog Box is displayed. Enter the following values in the parameters.
- **Name**: D10000 (Start address of the output data from node 1)
- **Size**: 24 (bytes)

After entering, click the **Register** Button.

The Edit Tag Dialog Box is displayed. Click the **Close** Button.

When you finish the registration, click the **OK** Button on the Edit Tag Dialog Box.
11 The dialog box on the right is displayed. Click the Yes Button.

12 The Edit Device Parameters Dialog Box is displayed again.
6. EtherNet/IP Connection Procedure

6.4.6. Setting Connections

Associate the tags of target device (node that receives the open request) with the tags of
originator (node that requests opening).

1. Select the Connections Tab in the Edit Device Parameters Dialog Box. Then, select 192.168.250.2 in the Unregister Device List Field. Click the Down Button that is shown in the dialog box.

2. 192.168.250.2 is registered in the Register Device List. Select 192.168.250.2 and click the New Button.

3. The Edit Connection Dialog Box is displayed. Select Discrete Exclusive Owner from the Connection I/O Type pull-down list. Set the values listed in the table below by using the pull-down lists in Originator Device Field and Target Device Field.
## Settings of Connection

<table>
<thead>
<tr>
<th>Connection I/O type</th>
<th>Input Tag Set</th>
<th>Consume Data From/Produce Data To</th>
</tr>
</thead>
<tbody>
<tr>
<td>Originator device</td>
<td>D10100 - [56Byte]</td>
<td>Multi-cast connection</td>
</tr>
<tr>
<td>Connection Type</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Output Tag Set</td>
<td>D10000 - [24Byte]</td>
<td>Point to Point connection</td>
</tr>
<tr>
<td>Target Device</td>
<td>Input_101- [56Byte]</td>
<td></td>
</tr>
<tr>
<td>Input Tag Set</td>
<td>Output_100- [24Byte]</td>
<td></td>
</tr>
</tbody>
</table>

4. Confirm that the settings are correct and click the **Regist** Button.

5. The Edit Connection Dialog Box is displayed. Do not make any setting and click the **Close** Button.
6. EtherNet/IP Connection Procedure

6. The Edit Device Parameters Dialog Box is displayed again. Click the OK Button.

7. When the connection setting is completed, the registered node address is displayed under the device icon of node 2 on the Network Configuration Pane.
6. EtherNet/IP Connection Procedure

6.4.7. Transferring the Tag Data Link Parameters

Transfer the set tag data link parameters to the PLC.

1. Right-click node 1 device on the Network Configuration Pane and select **Parameter - Download**.

   The dialog box on the right is displayed. Click the **Yes** Button.

2. The tag data link parameters are downloaded from Network Configurator to the PLC.

3. The dialog box on the right is displayed. Click the **OK** Button.
6. EtherNet/IP Connection Procedure

6.5. Checking the EtherNet/IP Communications

Confirm that the EtherNet/IP communications are performed normally.

6.5.1. Checking the Connection Status

Check the connection status of EtherNet/IP.

1. Confirm that the tag data links are normally in operation by checking the status information on the Device Monitor Window of the Network Configurator.

   • PLC (EtherNet/IP Unit)
     LED indicators in normal status.
     [MS]: Lit green
     [NS]: Lit green
     [COMM]: Lit yellow
     [100M] or [10M]: Lit yellow

   • Displacement Sensor
     During normal connection, the red and green indicators on the ETHERNET connector are lit.

2. Confirm that the tag data links are normally in operation by checking the status information on the Device Monitor Window of the Network Configurator.

   Right-click the device icon of node 1 on the Network Configuration Pane and select the **Monitor**.
3. The dialog box on the right displays the Status 1 Tab Page of the Device Monitor Dialog Box. When the items in the right dialog are selected, the data links are normally in operation.

4. Select **Disconnect** from the Network Menu to go offline. The color of the icon on the figure changes from blue. Select **Exit** from the File Menu to exit the Network Configurator.
6.5.2. Checking Data that are Sent and Received

Confirm that correct data are sent and received.

**Caution**

Confirm safety sufficiently before monitoring power flow and present value status in the Ladder Section window or before monitoring present values in the Watch window. If force-set/reset or set/reset operations are incorrectly performed by pressing short-cut keys, the devices connected to Output Units may malfunction, regardless of the operating mode of the CPU Unit.

1. Confirm that the operating mode of the PLC is Stop/Program Mode.

   *If the PLC is not in Program Mode, change to Program Mode by referring to step 1 of 6.4.3. Setting the IP Address.*

2. Select **Edit - Memory** from the PLC Menu.
3 Double-click D from the list in the PLC Memory Window that is displayed.

4 Select Display - Binary from the View Menu.

5 Select Monitor from the Online Menu.

6 The Monitor Memory Areas Dialog Box is displayed. Select the D Checkbox and click the Monitor Button.

7 Enter 10000 in the Start Address Field in the D Window. Confirm that the start address was changed to D10000.
8 Select the bits below and click the On Button. (After turning them ON, the values change to 1.)
   Bit 14 of DM10006
   Bit 6 of DM10007
   Bits 2, 7, 8, 9 of DM10008

   Then, turn ON bit 0 of DM10000.

   *DM10006 and DM10007 are an area for a command code and contain 4000 (Hex) and 0040 (Hex) (System data acquisition).
   DM10008 is an area for Command Parameter 1 and contains 0384 (Hex) (900 in decimal) (the number of decimal places).
   Bit 0 of D10000 is a command execution (EXE) flag.

9 Enter 10100 in the Start Address Field on the D Window.
   Confirm that the start address was changed to D10100.

10 Confirm that values of DM10106 to DM10110 are set as shown on the right.

   *DM10106 and DM10107 contain the command code, and DM10108 and DM10109 contain the command execution result (0: OK).
   DM10110 contains 0001 (Hex) (1 digit) that is response data (the number of decimal places).
7. Initialization Method

This document explains the setting procedure from the factory default setting. Some settings may not be applicable as described in this document unless you use the devices with the factory default setting.

7.1. Initializing the PLC

To initialize the settings of the PLC, you need to initialize the CPU Unit and EtherNet/IP Unit. Change to the PROGRAM mode before the initialization.

7.1.1. EtherNet/IP Unit

(1) Select Edit - I/O Table and Unit Setup from the PLC Menu of the CX-Programmer. Right-click the EtherNet/IP Unit on the PLC IO Table Window and select Unit Setup from the menu.

(2) Click the Restart Button on the Edit Parameters Dialog Box.
(3) An execution confirmation dialog is displayed. Click the Yes Button.
   On the Restart Unit Dialog Box, select the Return to out-of-box configuration, and then emulate cycling power Option, and click the OK Button.
   A dialog box indicating the execution is completed is displayed. Click the OK Button.

7.1.2. CPU Unit
To initialize the settings of the CPU Unit, select Clear All Memory Areas from the PLC Menu of the CX-Programmer. On the Confirm All Memory Area Clear Dialog Box, select the Initialize Option and click the OK Button.

7.2. Initializing the Displacement Sensor
## 8. Revision History

These terms and conditions (these “Terms”) are deemed part of each order for products, purchases, applications, information, catalogs, manuals, brochures and other documents, whether electronic or in written form, along with all associated products or services purchased or otherwise provided by Omron Electronics LLC and its subsidiaries (“Omron”). Omron objects to any terms or conditions proposed in Buyer’s purchase order or other documents which are inconsistent with, or in addition to, these Terms.

2. Prices; Payment Terms. All prices stated are current, subject to change without notice, and are net prices net of any discounts, allowances, rebates, or price adjustments, on any unshipped portions of outstanding orders. Payments for Products are due net 30 days unless otherwise stated in the invoice.

3. Delivery; Cancellation. If any transaction involves the net amount of invoices sent to Buyer after deducting transportation charges, taxes and duties, and will be allowed only if (i) the invoice is paid according to Omron’s payment terms and (ii) Buyer has not paid due amounts.

4. Interest. Omron, at its option, may charge Buyer 1-1/2% interest per month on any unshipped portions of outstanding orders, which is in addition to any interest paid to Omron.

5. Orders. Omron will accept no order less than $200 net billing.

6. Governmental Approvals. Buyer shall be responsible for, and shall bear all costs involved in, obtaining any government approvals required for the importation or sale of the Products.

7. Taxes. All taxes, duties and other governmental charges (other than general property and income taxes), including any interest or penalties thereon, imposed directly or indirectly on Omron or required to be collected directly or indirectly by Omron for the manufacture, production, sale, delivery, importation, conversion or use of the Products sold hereunder (including customs duties and sales, excise, use, turnover and license taxes) shall be charged to and remitted by Buyer to Omron.

8. Financial. If the financial position of Buyer at any time becomes unsatisfactory to Omron, Omron reserves the right to stop shipments or require satisfactory security from Buyer. If Buyer fails to make payments according to these Terms or any other agreement, Omron may, without liability and in addition to other remedies, cancel any unshipped portion of the Products, again stop any Products in transit, require Buyer pay cash amounts, including amounts payable hereunder, whether or not then due, with or without delay, and sell it by Buyer to Omron. Buyer shall in any event remain liable for all unpaid accounts.

9. Cancellation; Etc. Orders are subject to rescinding or cancellation unless Buyer indemnifies Omron against all related costs or expenses.

10. Force Majeure. Omron shall not be liable for any delay or failure in delivery reasonably attributable to act of God, including but not limited to, war, strikes, strikes or other labor disputes, shortage of labor or materials, accidents to machinery, acts of sabotage, riots, delay in or lack of transportation or the force majeure clause of any government authority.

11. Shipping; Delivery. Unless otherwise expressly agreed in writing by Omron:

a. Shipments will be by a carrier selected by Omron; Omron will not drop ship “brown banded” or non-competitive products.

b. Such carrier shall act as the agent of Buyer and delivery to such carrier shall constitute delivery to Buyer.

c. All sales and shipments of Products shall be FOB shipping point (unless otherwise stated in writing by Omron), at which point title and risk of loss shall pass from Omron to Buyer; provided that Omron shall retain a security interest in the Products until the full purchase price is paid.

d. Delivery and shipping dates are estimates only; and

e. Omron will package Products as it deems proper for protection against normal handling and extra charges apply to special conditions.

12. Compliance with Law. Buyer agrees against any claim or damage to the Products occurring before delivery to the carrier must be presented in writing to Omron within 30 days of receipt of the invoice from Omron.

13. Product Warranty. Omron’s exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve (12) months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

14. Limitation of Liability; Etc. OMROM COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY. Further, in no event shall liability of Omron Companies exceed the price of the Product on which liability is asserted.

15. Indemnities. Buyer shall indemnify and hold harmless Omron Companies and their employees from and against all liabilities, losses, claims, costs and expenses (including attorney’s fees and expenses) related to any claim, investigation, litigation or proceeding (whether or not Omron is a party) which arises or is alleged to arise from Buyer’s acts or omissions under these Terms or in any way with respect to the Products. Without limiting the foregoing, Buyer (at its own expense) shall indemnify and hold harmless Omron and deliver or settle any action brought against such Companies to the extent based on a claim that any Product made to Buyer specifications infringed intellectual property rights of any third party. Buyer is financially responsible for these actions.

16. Property. Confidentiality. Any intellectual property in the Products is the exclusive property of Omron. Information presented by Omron Companies has been prepared for general information only and may change at any time without notice. Buyer and Omron relating to the Products, and no provisions may be changed, without Omron’s written consent. (c) Law. These Terms are governed by the law of the jurisdiction of the home office of the Omron company from which Buyer is purchasing the Product, without regard to any conflicts of law principles. (d) Amendment. These Terms constitute the entire agreement between Buyer and Omron relating to the sale of this Product, and Buyer acknowledges and agrees that any prior oral or written statements regarding this agreement are superseded by the terms of this agreement. (e) Severability. If any provision herein is held invalid or ineffective, in whole or part, or is not enforceable under the laws of the jurisdiction in which it is being held, such provision shall be deemed severable and remains in full force and effect to the extent not invalid or ineffective. If any part of a provision is not enforceable in the jurisdiction in which it is being held, then parties shall have no liability against the amount owing in respect of this invoice. (f) Definitions. As used herein, “including” means including, but not limited to, any other period or phrase that has been defined as “including” (or similar words) means Omron Corporation and any direct or indirect subsidiary or affiliate thereof.

Certain Precautions on Specifications and Use

1. Suitability of Use. Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer’s application or use of the Product. At Buyer’s request, Omron will provide applicable third party certification documents identifying recognized limits and limitations of the Product. Any application without an applicable standard, code or regulation, or which is not within any such standard, code or regulation, is not within the scope of the “Products” and is not covered by any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right, (c) Buyer Remedy. Omron’s sole obligation hereunder shall be Omron’s election, to (i) replace (in the form originally shipped with Buyer responsible for labor changes for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, installation or other expenses regarding the Products unless Omron’s analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for any liability or unsuitability or the results from the use or treatment of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty. See http://www.omron247.com or contact your Omron representative for published information.

2. Programmed Products. Omron Companies shall not be responsible for the information or the nature of the programming of use applicable to the intended use of the Product. This information is intended for guidance only and is not a guarantee of performance. Changes in Specifications. Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron’s representative at any time prior to placing an order to confirm actual specifications of purchased Product.

3. Performance Data. Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability or fitness for a particular purpose of the Products. BUYER ACKNOWLEDGES AND AGREES THAT THE OMROM’S PRODUCT WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. Omron Companies shall not be liable for any product which fails to meet the requirements of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right.

4. Change in Specifications. Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron’s representative at any time prior to placing an order to confirm actual specifications of purchased Product.

5. Errors and Omissions. Information presented by Omron Companies has been prepared for general information only and may change at any time without notice. Buyer and Omron relating to the Products, and no provisions may be changed, without Omron’s written consent. (c) Law. These Terms are governed by the law of the jurisdiction of the home office of the Omron company from which Buyer is purchasing the Product, without regard to any conflicts of law principles. (d) Amendment. These Terms constitute the entire agreement between Buyer and Omron relating to the sale of this Product, and Buyer acknowledges and agrees that any prior oral or written statements regarding this agreement are superseded by the terms of this agreement. (e) Severability. If any provision herein is held invalid or ineffective, in whole or part, or is not enforceable under the laws of the jurisdiction in which it is being held, such provision shall be deemed severable and remains in full force and effect to the extent not invalid or ineffective. If any part of a provision is not enforceable in the jurisdiction in which it is being held, then parties shall have no liability against the amount owing in respect of this invoice. (f) Definitions. As used herein, “including” means including, but not limited to, any other period or phrase that has been defined as “including” (or similar words) means Omron Corporation and any direct or indirect subsidiary or affiliate thereof.
