Digital Temperature Controller
E5GC (48 × 24 mm)

Easy Operation and High Performance of the E5C Series in a Compact 48 × 24-mm Body

- A compact body of 48 × 24 × 90 mm (W × H × D) that is ideal for small equipment, laboratory instruments, and others.
- White PV display with a height of 10.5 mm for high visibility even with the compact body.
- Removable terminal block to simplify maintenance. Select from screw terminals or screwless clamp terminals for the wiring method.
- High-speed sampling at 50 ms.
- Easy connections to a PLC with programless communications.
- Set up the Controller without wiring the power supply by connecting to the computer with a Communications Conversion Cable (sold separately). Setup is easy with the CX-Thermo (sold separately).

Main I/O Functions

- Sensor Input
  - Universal input
  - Thermocouple
  - Pt
  - Analog current/voltage
- Indication Accuracy
  - Thermocouple input: ±0.3% of PV
  - Pt input: ±0.2% of PV
  - Analog input: ±0.2% of FS
- Event Inputs
  - None
  - 1
  - 2
- Serial Communications
  - None
  - RS-485
- Sampling Period
  - 50 ms
- PF (shift) Key
  - Temperature status display
  - Simple programming
  - Independent heating and cooling PID control
  - Changed parameter display
  - Display brightness setting
  - Simple transfer output (only on models with linear current outputs)
  - Work Bit Message
- Control Output 1
  - Relay output
  - Voltage output (for driving SSR)
  - Linear current output
- Auxiliary Outputs
  - None
  - 1
  - 2
- Dual displays: PV/SV
- 4-digit displays

Refer to your OMRON website for the most recent information on applicable safety standards.

This datasheet is provided as a guideline for selecting products. Be sure to refer to the following manuals for application precautions and other information required for operation before attempting to use the product.
E5C Digital Temperature Controllers User’s Manual (Cat. No. H174)
E5C Digital Temperature Controllers Communications Manual (Cat. No. H175)

*1 The control output can be used as a simple transfer output.
*2 Only option 000 can be selected if an auxiliary output is zero.
*3 Option 016 and 023 can be selected only if two auxiliary outputs are selected.
*4 Option with HB and HS alarms (023) cannot be selected if a linear current output is selected for the control output.
*5 Option 024 can be selected only if one auxiliary output is selected.

Heating and Cooling Control

● Using Heating and Cooling Control

1. Control Output Assignment
   An auxiliary output is used as the cooling control output.
2. Control
   If PID control is used, you can set PID control separately for heating and cooling.
   This allows you to handle control systems with different heating and cooling response characteristics.
### Optional Products (Order Separately)

#### USB-Serial Conversion Cable

<table>
<thead>
<tr>

</table>
| Power supply voltage                               | A in model number: 100 to 240 VAC, 50/60 Hz  
D in model number: 24 VAC, 50/60 Hz; 24 VDC |
| Operating voltage range                            | 85% to 110% of rated supply voltage                                      |
| Power consumption                                  | 5.9 VA max. at 100 to 240 VAC, and 3.2 VA max. at 24 VAC or 1.8 W max. at 24 VDC |
| Sensor input                                        | Temperature input  
Platinum resistance thermometer: Pt100 or JPt100  
Infrared temperature sensor (ES1B): 10 to 70°C, 60 to 120°C, 115 to 165°C, or 140 to 260°C  
Analog input  
Current input: 4 to 20 mA or 0 to 20 mA  
Voltage input: 1 to 5 V, 0 to 5 V, or 0 to 10 V |
| Input impedance                                     | Current input: 150 Ω max., Voltage input: 1 MΩ min. (Use a 1:1 connection when connecting the ES2-HB/THB.) |
| Control method                                      | ON/OFF control or 2-PID control (with auto-tuning)                      |
| Control output                                      | Relay output  
SPST-NO, 250 VAC, 2 A (resistive load), electrical life: 100,000 operations, minimum applicable load: 5 V, 10 mA (reference value)  
Voltage output (for driving SSR)  
Output voltage 12 VDC ±20% (PNP), max. Load current: 21 mA, with short-circuit protection circuit  
Linear current output  
4 to 20 mA DC/0 to 20 mA DC, load: 500 Ω max., resolution: Approx. 10,000 |
| Auxiliary output                                    | Number of outputs  
1 or 2 (depends on model)  
Output specifications  
SPST-NO relay outputs, 250 VAC, 2 A (resistive load), Electrical life: 100,000 operations, Minimum applicable load: 10 mA at 5 V (reference value) |
| Event input                                         | Number of inputs  
1 or 2 (depends on model)  
External contact input specifications  
Contact input ON: 1 kΩ max., OFF: 100 kΩ min.  
Non-contact input ON: Residual voltage 1.5 V max.; OFF: Leakage current 0.1 mA max.  
Current flow: approx. 7 mA per contact |
| Setting method                                      | Digital setting using front panel keys                                  |
| Indication method                                   | 11-segment digital displays and individual indicators                  |
| Character height PV: 10.5 mm, SV: 5.0 mm            |                                                                         |
| Multi SP                                            | Up to eight set points (SP0 to SP7) can be saved and selected using the event inputs, key operations, or serial communications.* |
| Bank switching                                      | None                                                                    |
| Other functions                                     | Manual output, heating/cooling control, loop burnout alarm, SP ramp, other alarm functions, heater burnout (HB) alarm (including SSR failure (HS) alarm), 40% AT, 100% AT, MV limiter, input digital filter, self tuning, robust tuning, PV input shift, run/stop, protection functions, extraction of square root, MV change rate limit, logic operations, temperature status display, simple programming, moving average of input value, display brightness setting, simple transfer output, and work bit message |
| Ambient operating temperature                       | –10 to 55°C (with no condensation or icing), For 3-year warranty: –10 to 50°C with standard mounting (with no condensation or icing) |
| Ambient operating humidity                         | 25% to 85%                                                              |
| Storage temperature                                 | –25 to 65°C (with no condensation or icing)                            |
| Altitude                                            | 2,000 m max.                                                            |
| Recommended fuse                                    | T2A, 250 VAC, time-lag, low-breaking capacity                          |
| Installation environment                           | Installation Category II, Pollution Degree 2 (IEC 61010-1 compliant)    |

* Only four set points are selectable for event inputs.
### Input Ranges

#### Thermocouple/Platinum Resistance Thermometer (Universal inputs)

<table>
<thead>
<tr>
<th>Sensor type</th>
<th>Platinum resistance thermometer</th>
<th>Thermocouple</th>
<th>Infrared temperature sensor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sensor specification</td>
<td>Pt100</td>
<td>JPt100</td>
<td>K</td>
</tr>
<tr>
<td>Temperature range (°C)</td>
<td>2300</td>
<td>2000</td>
<td>1700</td>
</tr>
</tbody>
</table>

The applicable standards for the input types are as follows:

- **JPt100**: JIS C 1604-1997, IEC 60751
- **L**: Fe-CuNi, DIN 43710-1985
- **Pt100**: JIS C 1604-1997, IEC 60751
- **U**: Cu-CuNi, DIN 43710-1985
- **N**: According to Platinel II electromotive force charts from BASF (previously Engelhard)
- **W**: W5Re/W26Re, ASTM E988-1990

## Alarm Types

Each alarm can be independently set to one of the following 17 alarm types. The default is 2: Upper limit. (See note.) Auxiliary outputs are allocated to alarms. ON delays and OFF delays (0 to 999 s) can also be specified.

**Note:** In the default settings for models with HB or HS alarms, alarm 1 is set to a heater alarm (HA) and the Alarm Type 1 parameter is not displayed. To use alarm 1, set the output assignment to alarm 1.

<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Set value: 5, Upper- and lower-limit alarm with standby sequence**

- In cases 1 and 2 above, the alarm is always OFF if the upper- and lower-limit hysteresis overlaps.
- In case 3, the alarm is always OFF.

*Refer to the E5GC Digital Temperature Controllers User’s Manual (Cat. No. H174) for information on the operation of the standby sequence.*

*Refer to the E5GC Digital Temperature Controllers User’s Manual (Cat. No. H174) for information on the LBA.*

*Refer to the E5GC Digital Temperature Controllers User’s Manual (Cat. No. H174) for information on the PV change rate alarm.*

When heating/cooling control is performed, the MV absolute-value upper-limit alarm functions only for the heating operation and the MV absolute-value lower-limit alarm functions only for the cooling operation.

\(^1\) The indication accuracy of K thermocouples in the \(-200\) to \(1,300\degree C\) range, T and N thermocouples at a temperature of \(-100\degree C\) max., and U and L thermocouples at any temperature is \(\pm 2\degree C \pm 1\text{ digit max.}\) The indication accuracy of B thermocouples at a temperature of \(400\degree C\) max. is not specified. The indication accuracy of B thermocouples at a temperature of \(400\) to \(800\degree C\) is \(\pm 3\degree C\) max. The indication accuracy of R and S thermocouples at a temperature of \(200\degree C\) max. is \(\pm 3\degree C \pm 1\text{ digit max.}\) The indication accuracy of W thermocouples is \((\pm 0.3\% \text{ of PV or } \pm 3\degree C, \text{ whichever is greater}) \pm 1 \text{ digit max.}\) The indication accuracy of PLII thermocouples is \((\pm 0.3\% \text{ of PV or } \pm 2\degree C, \text{ whichever is greater}) \pm 1 \text{ digit max.}\) \(^2\) Ambient temperature: \(-10\degree C\) to \(23\degree C\), Voltage range: \(-15\% \text{ to } 10\% \text{ of rated voltage}\) \(^3\) The unit is determined by the setting of the Integral/Derivative Time Unit parameter. \(^4\) External serial communications (RS-485) and USB-Serial Conversion Cable communications can be used at the same time.
Communications Functions

- The baud rate, data bit length, stop bit length, and vertical parity can be individually set using the Communications Setting Level.

Applicable OS
- Windows XP/Vista/7/8

Applicable software
- CX-Thermo version 4.62 or higher

Applicable models
- E5-CJ Series, E5-C Series, and E5CB Series

USB interface standard
- Conforms to USB Specification 2.0

DTE speed
- 38,400 bps

Connector specifications
- Computer: USB Type A plug
- Digital Temperature Controller: Special serial connector

Power supply
- Bus power (Supplied from the USB host controller)

Power supply voltage
- 5 VDC

Current consumption
- 450 mA max.

Output voltage
- 4.7±0.2 VDC (Supplied from USB-Serial Conversion Cable to the Digital Temperature Controller.)

Output current
- 250 mA max. (Supplied from USB-Serial Conversion Cable to the Digital Temperature Controller.)

Ambient operating temperature
- 0 to 55°C (with no condensation or icing)

Ambient operating humidity
- 10% to 80%

Storage temperature
- -20 to 60°C (with no condensation or icing)

Storage humidity
- 10% to 80%

Altitude
- 2,000 m max.

Weight
- Approx. 120 g

Windows is a registered trademark of Microsoft Corporation in the United States and other countries.
* Use a high-power port for the USB port.

Note: A driver must be installed on the computer. Refer to the Instruction Manual included with the Cable for the installation procedure.

Communications Specifications

Transmission line connection method
- RS-485: Multidrop

Communications
- RS-485 (two-wire, half duplex)

Synchronization method
- Start-stop synchronization

Protocol
- CompoWay/F, or Modbus

Baud rate
- 9,600, 19,200, 38,400, or 57,600 bps

Transmission code
- ASCII

Data bit length
- 7 or 8 bits

Stop bit length
- 1 or 2 bits

Error detection
- Vertical parity (none, even, odd)
- Block check character (BCC) with CompoWay/F or CRC-16 with Modbus

Flow control
- None

Interface
- RS-485

Retry function
- None

Communications buffer
- 217 bytes

Communications response wait time
- 0 to 99 ms
- Default: 20 ms

* The baud rate, data bit length, stop bit length, and vertical parity can be individually set using the Communications Setting Level.

Communications Functions

Programless communications
- You can use the memory in the PLC to read and write E5: 1.C parameters, start and stop operation, etc.
- The E5: 1.C automatically performs communications with PLCs. No communications programming is required.
- Number of connected Digital Temperature Controllers: 32 max. (Up to 16 for the FX Series)
- Applicable PLCs: OMRON PLCs
  - CS Series, CJ Series, or CP Series
  - Mitsubishi Electric PLCs
  - MELSEC Q Series, L Series, or FX Series (compatible with the FX2 or FX3 (excluding the FX1S))
  - KEYENCE PLCs
  - KEYENCE KV Series

Component Communications
- When Digital Temperature Controllers are connected, set points and RUN/STOP commands can be sent from the Digital Temperature Controller that is set as the master to the Digital Temperature Controllers that are set as slaves.
- Slope and offsets can be set for the set point.
- Number of connected Digital Temperature Controllers: 32 max. (including master)

Copying
- When Digital Temperature Controllers are connected, the parameters can be copied from the Digital Temperature Controller that is set as the master to the Digital Temperature Controllers that are set as slaves.
- MELSEC is a registered trademark of Mitsubishi Electric Corporation.
- KEYENCE is a registered trademark of Keyence Corporation.
- Both the programless communications and the component communications support the copying.

Current Transformer (Order Separately) Ratings

- Dielectric strength: 1,000 VAC for 1 min
- Vibration resistance: 50 Hz, 98 m/s²
- Weight: E54-CT1: Approx. 11.5 g, E54-CT3: Approx. 50 g

Accessories (E54-CT3 only)
- Armatures (2)
- Plugs (2)

Heater Burnout Alarms and SSR Failure Alarms

CT input (for heater current detection)
- Models with detection for single-phase heaters: One input
- Maximum heater current: 50 A AC
- Input current indication accuracy: ±5% FS ±1 digit max.

Heater burnout alarm setting range
- 0.1 A to 49.9 A (in units of 0.1 A)
  - Minimum detection ON time: 100 ms *3

SSR failure alarm setting range
- 0.1 A to 49.9 A (in units of 0.1 A)
  - Minimum detection OFF time: 100 ms *4

*1 For heater burnout alarms, the heater current will be measured when the control output is ON, and the output will turn ON if the heater current is lower than the set value (i.e., heater burnout detection current value).
*2 For SSR failure alarms, the heater current will be measured when the control output is OFF, and the output will turn ON if the heater current is higher than the set value (i.e., SSR failure detection current value).
*3 The value is 30 ms for a control period of 0.1 s or 0.2 s.
*4 The value is 35 ms for a control period of 0.1 s or 0.2 s.

Electrical Life Expectancy Curve for Control Output Relay (Reference Values)
External Connections

Control Outputs

- Relay output: 250 VAC, 2 A (resistive load)
- Voltage output (for driving SSR): 12 VDC, 21 mA
- Linear current output: 0 to 20 mA DC

Note: 1. The application of the terminals depends on the model.
2. Do not wire the terminals that are shown with a gray background.
3. When complying with EMC standards, the cable that connects the sensor must be 30 m or less. If the cable length exceeds 30 m, compliance with EMC standards will not be possible.

Isolation/Insulation Block Diagrams

- Reinforced insulation
- Functional insulation

Note: Auxiliary outputs 1 to 2 are not insulated.
Wiring Methods

Wires: AWG24 to AWG18 (equal to a cross-sectional area of 0.205 to 0.823 mm²) braided or solid wires

Nomenclature

E5GC

Controllers with Screw Terminal Blocks (M3 Screws)

- Terminal type: Forked or round crimped terminals
- Tightening torque for all terminals: 0.43 to 0.58 N·m

Controllers with Screwless Clamp Terminal Blocks

- Wire stripping length: 8 to 12 mm
- Ferrules: 8 to 12 mm
Use two Mounting Adapters, either on the top and bottom or on the right and left.

Setup Tool ports are provided as standard feature. Use these ports to connect a computer to the Digital Temperature Controller. The E58-CIFQ2 USB-Serial Conversion Cable and E58-CIFQ2-E Communications Conversion Cable are required to connect to the port on the bottom panel. (You cannot leave either port connected constantly during operation.)

- To install the Temperature Controller, insert it into a square hole in a panel with a thickness of 1 to 8 mm, and then insert the enclosed adapter so that it locks into the grooves on the top and bottom or on the left and right of the rear case.

- Tighten the two mounting screws on the top and bottom or on the right and left of the Mounting Adapters alternately little by little to maintain a balance, and tighten them to a torque of between 0.29 and 0.39 N·m.

- When two or more Temperature Controllers are mounted, make sure that the surrounding temperature does not exceed the allowable operating temperature range given below.

  Horizontal group mounting: −10 to 55°C
  Vertical group mounting of two Controllers: −10 to 45°C
  Vertical group mounting of three or more Controllers: −10 to 40°C

If you use vertical group mounting, you cannot draw out the interior body of the Controller.

E5GC Controllers with Screwless Clamp Terminal Blocks

Use two Mounting Adapters, either on the top and bottom or on the right and left.

Setup Tool ports are provided as standard feature. Use these ports to connect a computer to the Digital Temperature Controller. The E58-CIFQ2 USB-Serial Conversion Cable is required to connect to the port on the side panel. The E58-CIFQ2 USB-Serial Conversion Cable and E58-CIFQ2-E Communications Conversion Cable are required to connect to the port on the bottom panel. (You cannot leave either port connected constantly during operation.)

- To install the Temperature Controller, insert it into a square hole in a panel with a thickness of 1 to 8 mm, and then insert the enclosed adapter so that it locks into the grooves on the top and bottom or on the left and right of the rear case.

- Tighten the two mounting screws on the top and bottom or on the right and left of the Mounting Adapters alternately little by little to maintain a balance, and tighten them to a torque of between 0.29 and 0.39 N·m.

- When two or more Temperature Controllers are mounted, make sure that the surrounding temperature does not exceed the allowable operating temperature range given below.

  Horizontal group mounting: −10 to 55°C
  Vertical group mounting of two Controllers: −10 to 45°C
  Vertical group mounting of three or more Controllers: −10 to 40°C

If you use vertical group mounting, you cannot draw out the interior body of the Controller.
Accessories (Order Separately)

- **USB-Serial Conversion Cable**
  E58-CIFQ2

Note: Always use this product together with the E58-CIFQ2.

- **Conversion Cable**
  E58-CIFQ2-E

- **Current Transformers**

  **E54-CT1**

  **E54-CT3**

  **E54-CT3 Accessories**
  - Armature
  - Plug

- **Connection Example**
● Mounting Adapter
Y92F-53 (Two provided.)
One pair is provided with the Temperature Controller. Order this Adapter separately if it becomes lost or damaged.

● Waterproof Packing
Y92S-P12
The Waterproof Packing is provided with the Temperature Controller. Order the Waterproof Packing separately if it becomes lost or damaged. The Waterproof Packing can be used to achieve an IP66 degree of protection. (Deterioration, shrinking, or hardening of the waterproof packing may occur depending on the operating environment. Therefore, periodic replacement is recommended to ensure the level of waterproofing specified in IP66. The time for periodic replacement depends on the operating environment. Be sure to confirm this point at your site. Consider three years a rough standard.) The Waterproof Packing does not need to be attached if a waterproof structure is not required.

● Draw-out Jig
Y92F-55
Use this Draw-out Jig to remove the interior body of the Digital Temperature Controller from the case to perform maintenance without removing the terminal wiring.
### Operation

#### Setting Levels Diagram

**E5GC**

This diagram shows all of the setting levels. To move to the advanced function setting level and calibration level, you must enter passwords. Some parameters are not displayed depending on the protect level setting and the conditions of use.

Control stops when you move from the operation level to the initial setting level.

---

- **Operation Level**
  - Used for SP, alarm values, and other basic settings and monitoring.
  - Press the O Key for at least 1 s.
  - Only when Manual Mode was used just before power OFF

- **Adjustment Level**
  - Used to change adjustment parameters (PID constants, adjustment sensitivity, etc.)
  - Press the O + M Keys for at least 3 s.*2

- **Protect Level**
  - Used to set protection for operations.
  - Press the S Key.*3

- **Manual Control Level**
  - Used to set the MV manually.
  - Press the O Key for at least 1 s or the S Key for at least 1 s.*1

- **Monitor/Setting Item Level**
  - Used to display specified monitor and setting items.
  - Press the O Key for less than 1 s.

- **Communications Setting Level**
  - Used to set up communications.
  - Press the O Key for at least 3 s.*2

- **Initial Setting Level**
  - Used to set the input type and other basic settings.
  - Press the O Key for at least 1 s.

- **Advanced Function Setting Level**
  - Used to set application functions.
  - Press the O Key for less than 1 s.

- **Calibration Level**
  - Release protection and then enter the password (−169) for the amoV parameter.
  - Enter the password (1201) while cmov parameter is displayed.

---

*1 Set the PF Setting parameter to R•M (Auto/Manual).
*2 The No. 1 display will flash when the keys are pressed for 1 s or longer.
*3 Set the PF Setting parameter to Pf•dp (monitor/setting items).
**Operation**

**Parameters E5GC**

The following pages describe the parameters set in each level. Pressing the (Mode) Key at the last parameter in each level returns to the top parameter in that level. Some parameters may not be displayed depending on the model and other settings.

Error Displays (Troubleshooting)

When an error occurs, the No. 1 display or No. 2 display shows the error code. Take necessary measure according to the error code, referring the following table.

<table>
<thead>
<tr>
<th>Display</th>
<th>Name</th>
<th>Meaning</th>
<th>Action</th>
<th>Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>S:ERR</td>
<td>Input error</td>
<td>The input value exceeded the control range. The input type is not set correctly. The sensor is disconnected or short-circuited. The sensor is not wired correctly. The sensor is not wired.</td>
<td>Check the wiring for input to be sure it is wired correctly, not broken, and not shorted. Also check the input type. If there are no problems in the wiring or input type settings, cycle the power supply. If the display remains the same, replace the Digital Temperature Controller. If the display is restored to normal, then the probable cause is external noise affecting the control system. Check for external noise.</td>
<td>After the error occurs and it is displayed, the alarm output will operate as if the upper limit was exceeded. It will also operate as if transfer output exceeded the upper limit. If an input error is assigned to a control output or auxiliary output, the output will turn ON when the input error occurs. The error message will appear in the display for the PV.</td>
</tr>
<tr>
<td>ccccc</td>
<td>Display range exceeded</td>
<td>Below -1,999</td>
<td>-</td>
<td>Control continues and operation is normal. The value will appear in the display for the PV. Refer to the E5C-D Digital Temperature Controllers User’s Manual (Cat. No. H174) or the E5C-T Digital Temperature Controllers Programmable Type User’s Manual (Cat. No. H185) for information on the controllable range.</td>
</tr>
<tr>
<td>ccccc</td>
<td>Display range exceeded</td>
<td>Above 9,999</td>
<td>-</td>
<td>Control continues and operation is normal. The value will appear in the display for the PV. Refer to the E5C-D Digital Temperature Controllers User’s Manual (Cat. No. H174) or the E5C-T Digital Temperature Controllers Programmable Type User’s Manual (Cat. No. H185) for information on the controllable range.</td>
</tr>
<tr>
<td>E333</td>
<td>A/D converter error</td>
<td>There is an error in the internal circuits.</td>
<td>After checking the input error, turn the power OFF then back ON again. If the display remains the same, the controller must be repaired. If the display is restored to normal, then a probable cause can be external noise affecting the control system. Check for external noise.</td>
<td>The control outputs, auxiliary outputs, and transfer outputs turn OFF. (A current output will be approx. 0 mA and a linear voltage output will be approx. 0V.)</td>
</tr>
<tr>
<td>E111</td>
<td>Memory error</td>
<td>There is an error in the internal memory operation.</td>
<td>First, cycle the power supply. If the display remains the same, the controller must be repaired. If the display is restored to normal, then a probable cause can be external noise affecting the control system. Check for external noise.</td>
<td>The control outputs, auxiliary outputs, and transfer outputs turn OFF. (A current output will be approx. 0 mA and a linear voltage output will be approx. 0V.)</td>
</tr>
<tr>
<td>FFFF</td>
<td>Overcurrent</td>
<td>This error is displayed when the peak current exceeds 55.0 A.</td>
<td>-</td>
<td>Control continues and operation is normal. The error message will appear for the following displays. Heater Current Value 1 Monitor Heater Current Value 2 Monitor Leakage Current Value 1 Monitor Leakage Current Value 2 Monitor</td>
</tr>
<tr>
<td>E1 E2</td>
<td>HB or HS alarm</td>
<td>If there is a HB or HS alarm, the No. 1 display will flash in the relevant setting level.</td>
<td>-</td>
<td>The No. 1 display for the following parameter flashes in Operation Level or Adjustment Level. Heater Current Value 1 Monitor Heater Current Value 2 Monitor Leakage Current Value 1 Monitor Leakage Current Value 2 Monitor However, control continues and operation is normal.</td>
</tr>
<tr>
<td>LCR1 LCR2</td>
<td>Potentiometer Input Error (Position-proportional Models Only)</td>
<td>&quot;- - - -&quot; will be displayed for the Valve Opening Monitor parameter if any of the following error occurs. • Motor calibration has not been performed. • The wiring of the potentiometer is incorrect or broken. • The potentiometer input value is incorrect (e.g., the input is out of range or the potentiometer has failed).</td>
<td>Check for the above errors.</td>
<td>Close control: The control output is OFF or the value that is set for the MV at PV Error parameter is output. Floating control: Operation will be normal.</td>

Safety Precautions

Be sure to read the precautions for all E5C/E5C-T models in the website at:
http://www.ia.omron.com/

Warning Indications

<table>
<thead>
<tr>
<th>CAUTION</th>
<th>Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage.</th>
</tr>
</thead>
</table>

Precautions for Safe Use

- Supplementary comments on what to do or avoid doing, to use the product safely.

Precautions for Correct Use

- Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction or undesirable effect on product performance.

Meaning of Product Safety Symbols

- Used to warn of the risk of electric shock under specific conditions.
- Used for general prohibitions for which there is no specific symbol.
- Used to indicate prohibition when there is a risk of minor injury from electrical shock or other source if the product is disassembled.
- Used for general CAUTION, WARNING, or DANGER precautions for which there is no specified symbol. (This symbol is also used as the alerting symbol, but shall not be used in this meaning on the product.)
- Used for general mandatory action precautions for which there is no specified symbol.

CAUTION

- Do not touch the terminals while power is being supplied. Doing so may occasionally result in minor injury due to electric shock.
- Electric shock may occur. Do not touch any cables or connectors with wet hands.
- Electric shock, fire, or malfunction may occasionally occur. Do not allow metal objects, conductors, cuttings from installation work, or moisture to enter the Digital Temperature Controller or the Setup Tool port or ports. Attach the cover to the front-panel Setup Tool port whenever you are not using it to prevent foreign objects from entering the port.
- Do not use the Digital Temperature Controller where subject to flammable or explosive gas. Otherwise, minor injury from explosion may occasionally occur.
- Not doing so may occasionally result in fire. Do not allow dirt or other foreign objects to enter the Setup Tool port or ports, or between the pins on the connectors on the Setup Tool cable.

Minor electric shock or fire may occasionally occur. Do not use any cables that are damaged.

Never disassemble, modify, or repair the product or touch any of the internal parts. Minor electric shock, fire, or malfunction may occasionally occur.

CAUTION - Risk of Fire and Electric Shock

a. This product is UL listed*1 as Open Type Process Control Equipment. It must be mounted in an enclosure that does not allow fire to escape externally.
b. More than one disconnect switch may be required to de-energize the equipment before servicing the product.
c. Signal inputs are SELV, limited energy. *2
d. Caution: To reduce the risk of fire or electric shock, do not interconnect the outputs of different Class 2 circuits. *3

If the output relays are used past their life expectancy, contact fusing or burning may occasionally occur. Always consider the application conditions and use the output relays within their rated load and electrical life expectancy. The life expectancy of output relays varies considerably with the output load and switching conditions.

Even if you replace only the Main Unit of the E5DC, check the condition of the Terminal Unit. If corroded terminals are used, contact failure in the terminals may cause the temperature inside the Digital Temperature Controller to increase, possibly resulting in fire.

If the terminals are corroded, replace the Terminal Unit as well.

Tighten the terminal screws to the rated torque of between 0.43 and 0.58 N·m. *4

Loose screws may occasionally result in fire.

Set the parameters of the product so that they are suitable for the system being controlled. If they are not suitable, unexpected operation may occasionally result in property damage or accidents.

A malfunction in the product may occasionally make control operations impossible or prevent alarm outputs, resulting in property damage. To maintain safety in the event of malfunction of the product, take appropriate safety measures, such as installing a monitoring device on a separate line.

*1. E5CC, E5EC, E5AC, and E5DC Digital Temperature Controllers that were shipped through November 2013 are UL recognized.
*2. An SELV (separated extra-low voltage) system is one with a power supply that has double or reinforced insulation between the primary and the secondary circuits and has an output voltage of 30 V r.m.s. max. and 42.4 V peak max. or 60 VDC max.
*3. A class 2 circuit is one tested and certified by UL as having the current and voltage of the secondary output restricted to specific levels.
*4. The specified torque is 0.5 N·m for the E5CC-U.
Precautions for Safe Use

Be sure to observe the following precautions to prevent malfunction or adverse effects on the performance or functionality of the product. Not doing so may occasionally result in faulty operation. Do not handle the Digital Temperature Controller in ways that exceed the ratings.

1. This product is specifically designed for indoor use only. Do not use this product in the following places:
   - Places directly subject to heat radiated from heating equipment.
   - Places subject to splashing liquid or oil atmosphere.
   - Places subject to direct sunlight.
   - Places subject to dust or corrosive gas (in particular, sulfide gas and ammonia gas).
   - Places subject to intense temperature change.
   - Places subject to icing and condensation.
   - Places subject to vibration and large shocks.

2. Use and store the product within the rated ambient temperature and humidity.

3. To allow heat to escape, do not block the area around the Digital Temperature Controller.

4. Be sure to wire properly with correct signal name and polarity of terminals.

5. Use the specified size of cramped terminals (M3.5, width of 5.2 mm or less) to wire the ESCC, ESEC, ESAC, ESAC, E5CC-U, or E5:C-T. To connect bare wires to the terminal block of the E5CC, ESCC, ESEC, ESAC, ESAC, or E5:C-T, use copper braided or solid wires with a gage of AWG24 to AWG18 (equal to a cross-sectional area of 0.205 to 0.823 mm²). The stripping length is 6 to 8 mm. Up to two wires of the same size and type, or two cramped terminals can be inserted into a single terminal. Use the specified size of cramped terminals (M3.5, width of 7.2 mm or less) to wire the E5GC. * To connect bare wires to the terminal block of the E5GC, use copper braided or solid wires with a gage of AWG24 to AWG18 (equal to a cross-sectional area of 0.205 to 2.081 mm²). The stripping length is 5 to 6 mm. Up to two wires of the same size and type, or two cramped terminals can be inserted into a single terminal. Use the specified size of cramped terminals (M3.5, width of 5.8 mm or less) or to wire the E5GC. * To connect bare wires to the terminal block of the E5GC, use copper braided or solid wires with a gage of AWG24 to AWG18 (equal to a cross-sectional area of 0.205 to 0.823 mm²). The stripping length is 6 to 8 mm. The stripping length for Digital Temperature Controllers with screwless clamp terminal blocks is 6 to 12 mm. Up to two wires of the same size and type, or two cramped terminals can be inserted into a single terminal. When connecting two wires into one terminal of a Digital Temperature Controller with a screwless clamp terminal block, use ferrules with a diameter of 0.8 to 1.4 mm and an exposed conductor length of 8 to 12 mm that two wires are cramped for a ferrule.* The Digital Temperature Controller with screwless clamp terminals underwent UL testing with one braided wire connected.

6. Do not wire the terminals that are not used.

7. Use a commercial power supply for the power supply voltage input to a Digital Temperature Controller with AC input specifications. Do not use the output from an inverter as the power supply. Depending on the output characteristics of the inverter, temperature increases in the Digital Temperature Controller may cause smoke or fire damage even if the inverter has a specified output frequency of 50/60 Hz.

8. To avoid inductive noise, keep the wiring for the product’s terminal block away from power cables carry high voltages or large currents. Also, do not wire power lines together with or parallel to product wiring. Using shielded cables and using separate conduits or ducts is recommended. Attach a surge suppressor or noise filter to peripheral devices that generate noise (in particular, motors, transformers, solenoids, magnetic coils, or other equipment that have an inductance component).

9. When a noise filter is used at the power supply, first check the voltage or current, and attach the noise filter as close as possible to the product.

10. Make sure that the rated voltage is attained within two seconds of turning ON the product using a switch or relay contact. If the voltage is applied gradually, the power may not be reset or output malfunctions may occur.

11. Do not connect bare wires to the terminal block of the E5CC, E5EC, E5AC, E5DC, or E5:C-T digital temperature controllers.

12. For compliance with Lloyd’s standards, the E5CC, ESCC-U, ESEC, and ESAC must be installed under the conditions that are specified in Shipping Standards.

13. Do not store the E5CC, E5CC-U, E5AC, E5DC, or E5:C-T digital temperature controllers above each other and humidity.

14. Do not mount Digital Temperature Controllers above each other and humidity.

15. Do not disconnect the Communications Conversion Cable or the USB-Serial Conversion Cable while communications are in progress. Damage or malfunction may occur.

16. Do not touch the external power supply terminals or other metal parts on the Digital Temperature Controller.

17. Do not turn the power supply to the Digital Temperature Controller ON or OFF while the USB-Serial Conversion Cable is connected. The Digital Temperature Controller may malfunction.

18. Do not place heavy object on the Conversion Cable, bend the cable past its natural bending radius, or pull on the cable with undue force.

19. Allow as much space as possible between the product and devices that generate powerful high frequencies (high-frequency welders, high-frequency sewing machines, etc.) or surge.

20. Make sure that the indicators on the USB-Serial Conversion Cable are operating properly. Depending on the application conditions, deterioration in the connectors and cable may be accelerated, and normal communications may become impossible. Perform periodic inspection and replacement.

21. Connectors may be damaged if they are inserted with excessive force. When connecting a connector, always make sure that it is oriented correctly. Do not force the connector if it does not connect smoothly.

30. Noise may enter on the USB-Serial Conversion Cable, possibly causing equipment malfunctions. Do not leave the USB-Serial Conversion Cable connected constantly to the equipment.

31. For the E5DC, when you attach the Main Unit to the Terminal Unit, make sure that the hooks on the Main Unit are securely inserted into the Terminal Unit.

32. For the E5CC-U, when you attach the Main Unit to the socket, make sure that the hooks on the socket are securely inserted into the Main Unit.

33. Install the DIN Track vertically to the ground.

34. For the E5DC, always turn OFF the power supply before connecting the Main Unit to or disconnecting the Main Unit from the Terminal Unit, and never touch nor apply shock to the terminals or electronic components. When connecting or disconnecting the Main Unit, do not allow the electronic components to touch the case.

35. Observe the following precautions when you remove the terminal block or pulling out the interior of the product of the E5GC.

- Always follow the instructions provided in the E5CC Digital Temperature Controllers User’s Manual (Cat. No. H174).
- Turn OFF the power supply before you start and never touch nor apply shock to the terminals or electric components. When you insert the interior body of the Digital Temperature Controller, do not allow the electronic components to touch the case.
- Check for any corrosion on the terminals.
- When you insert the interior body into the rear case, confirm that the hooks on the top and bottom are securely engaged with the case.

### Shipping Standards

The E5CC, E5CC-U, E5EC, and E5AC comply with Lloyd's standards. When applying the standards, the following installation requirements must be met in the application.

### Application Conditions

#### Installation Location

The E5CC, E5CC-U, E5EC, and E5AC comply with installation category ENV1 and ENV2 of Lloyd’s standards. Therefore, they must be installed in a location equipped with air conditioning. They cannot be used on the bridge or decks, or in a location subject to strong vibration.

#### Precautions for Correct Use

### Service Life

1. Use the product within the following temperature and humidity ranges:
   - Temperature: -10 to 55°C (with no icing or condensation)
   - Humidity: 25% to 85%

   If the product is installed inside a control board, the ambient temperature must be kept to under 55°C, including the temperature around the product.

2. The service life of electronic devices like Digital Temperature Controllers is determined not only by the number of times the relay is switched but also by the service life of internal electronic components. Component service life is affected by the ambient temperature: the higher the temperature, the shorter the service life and, the lower the temperature, the longer the service life. Therefore, the service life can be extended by lowering the temperature of the Digital Temperature Controller.

3. When two or more Digital Temperature Controllers are mounted horizontally close to each other or vertically next to one another, the internal temperature will increase due to heat radiated by the Digital Temperature Controllers and the service life will decrease. In such a case, use forced cooling by fans or other means of air ventilation to cool down the Digital Temperature Controllers. When providing forced cooling, however, be careful not to cool down the terminals sections alone to avoid measurement errors.

### Measurement Accuracy

1. When extending or connecting the thermocouple lead wire, be sure to use compensating wires that match the thermocouple types.

2. When extending or connecting the lead wire of the platinum resistance thermometer, be sure to use wires that have low resistance and keep the resistance of the three lead wires the same.

3. Mount the product so that it is horizontally level.

4. If the measurement accuracy is low, check to see if input shift has been set correctly.

#### Water Proofing (Not applicable to the E5CC-U/ E5DC.)

The degree of protection is as shown below. Sections without any specification on their degree of protection or those with IPX0 are not waterproof.

Front panel: IP66, Rear case: IP20, Terminal section: IP00

When waterproofing is required, insert the Waterproof Packing on the backside of the front panel. Keep the Port Cover on the front-panel Setup Tool port of the E5EC/E5AC/E5EC-T/E5AC-T securely closed.

The degree of protection when the Waterproof Packing is used is IP66. To maintain an IP66 degree of protection, the Waterproof Packing and the Port Cover for the front-panel Setup Tool port must be periodically replaced because they may deteriorate, shrink, or harden depending on the operating environment. The replacement period will vary with the operating environment. Check the required period in the actual application. Use 3 years or sooner as a guideline.

If the Waterproof Packing and Port Cover are not periodically replaced, waterproof performance may not be maintained. If a waterproof structure is not required, then the Waterproof Packing does not need to be installed.

#### Operating Precautions

1. When using self-tuning, turn ON power for the load (e.g., heater) at the same time as or before supplying power to the Digital Temperature Controller. If power is turned ON for the Digital Temperature Controller before turning ON power for the load, self-tuning will not be performed properly and optimum control will not be achieved.

2. When starting operation after the Digital Temperature Controller has warmed up, turn OFF the power and then turn it ON again at the same time as turning ON power for the load. (Instead of turning the Digital Temperature Controller OFF and ON again, switching from STOP mode to RUN mode can also be used.)

3. Avoid using the Digital Temperature Controller in places near a radio, television set, or wireless installing. These devices can cause radio disturbances which adversely affect the performance of the Controller.

#### Others

1. Do not Connect or disconnect the Conversion Cable connector repeatedly over a short period of time. The computer may malfunction.

2. After connecting the Conversion Cable to the computer, check the COM port number before starting communications. The computer requires time to recognize the cable connection. This delay does not indicate failure.

3. Do not connect the Conversion Cable through a USB hub. Doing so may damage the Conversion Cable.

4. Do not use an extension cable to extend the Conversion Cable length when connecting to the computer. Doing so may damage the Conversion Cable.
Mounting

Mounting to a Panel

E5GC

1. For waterproof mounting, waterproof packing must be installed on the Digital Temperature Controller. Waterproofing is not possible when group mounting several Digital Temperature Controllers. Waterproof packing is not necessary when there is no need for the waterproofing function.

2. Insert the E5GC into the mounting hole in the panel.

3. Use two Mounting Adapters, either on the top and bottom or on the right and left.

4. Push the Adapters from the terminals up to the panel, and temporarily fasten the E5GC.

5. Tighten the two fastening screws on the Adapter. Alternately tighten the two screws little by little to maintain a balance. Tighten the screws to a torque of 0.29 to 0.39 N·m.

 Removing the Digital Temperature Controller from the case

E5GC

You can use the Y92F-55 Draw-out Jig to remove the interior body of the Digital Temperature Controller from the case to perform maintenance without removing the terminal wiring. This is possible only for the E5GC. It is NOT possible for the E5CC, E5CC-U, E5EC, E5AC, E5DC, or E5DC-T. Check the specifications of the case and Digital Temperature Controller before removing the Digital Temperature Controller from the case.

1. Insert the Y92F-55 Draw-out Jig securely into the Draw-out Jig insertion holes (one hole each on the top and bottom) and press it in firmly until the hooks engage on the top and bottom.

2. Pull out the Y92F-55 Draw-out Jig together with the front panel. Do not apply unnecessary force.

3. When inserting the body of the Temperature Controller into the case, make sure the PCBs are parallel to each other, make sure that the sealing rubber is in place, and press the E5GC toward the rear case into position. While pushing the E5GC into place, push down on the hooks on the top and bottom surfaces of the rear case so that the hooks are securely locked in place. Be sure that electronic components do not come into contact with the case.
E5GC

● Precautions when Wiring

• Separate input leads and power lines in order to prevent external noise.

• Use a shielded, AWG24 to AWG18 (cross-sectional area of 0.205 to 0.823 mm²) twisted-pair cable. Use a shielded, AWG24 to AWG14 (cross-sectional area of 0.205 to 2.081 mm²) twisted-pair cable for the E5CC-U. The stripping length is 6 to 8 mm for the E5CC, E5EC, E5AC, E5DC, or E5CC-T and 5 to 6 mm for the E5CC-U. The E5GC stripping length is 6 to 8 mm for models with screw terminal blocks and 8 to 12 mm for models with screwless clamp terminal blocks.

• Use crimp terminals when wiring the terminals.

• Use the suitable wiring material and crimp tools for crimp terminals.

• Tighten the terminal screws to a torque of 0.43 to 0.58 N·m. The specified torque is 0.5 N·m for the E5CC-U.

• For the E5GC, E5CC, E5EC, E5AC, E5DC, or E5CC-T, use the following types of crimp terminals for M3 screws.

• For the E5CC-U, use the following types of crimp terminals for M3.5 screws.

Three-year Guarantee

● Period of Guarantee

The guarantee period of the Unit is three years starting from the date the Unit is shipped from the factory.

Scope of Guarantee

The Unit is guaranteed under the following operating conditions.

1. Average Operating Temperature (see note): −10 °C to 50 °C

Note: Average Operating Temperature

Refer to the process temperature of the Unit mounted to a control panel and connected to peripheral devices on condition that the Unit is in stable operation, sensor input type K is selected for the Unit, the positive and negative thermocouple input terminals of the Unit are short-circuited, and the ambient temperature is stable.

Should the Unit malfunction during the guarantee period, OMRON shall repair the Unit or replace any parts of the Unit at the expense of OMRON.

- For E5GC Controllers with screwless clamp terminal blocks, use braided or solid wires with a gauge of AWG24 to AWG18 (equal to a cross-sectional area of 0.205 to 0.823 mm²). The length of the conductive portion inserted into the terminal must be 8 to 12 mm. Ferrules must be 0.8 to 1.4 mm in diameter.

- Recommended Ferrules for E5GC Screwless Clamp Terminals

Terms and Conditions of Sale

1. Offer, Acceptance. These terms and conditions (these "Terms") are deemed part of all contracts, purchase orders, quotes, quotations, proposals, catalogs, manuals, brochures and other documents, whether electronic or in written form, executed by Buyer or its suppliers, distributors and/or agents which are inconsistent with, or in addition to, these Terms.

2. Prices, Payment Terms. All prices stated are current, subject to change with or without notice, and unless otherwise stated, prices are subject to payment in full. Cash discounts, if any, will apply only on the net amount of invoices. Any intellectual property in the Products is the exclusive property of Omron.

3. Discounts. (a) Financial. Buyer may receive discounts as set forth in the price list attached hereto. If any, these terms will be subject to the consent and approval of Omron, subject to change with or without notice. (b) Other Discounts. If any, will be allowed only if (i) the invoice is paid according to Omron’s payment terms and (ii) Buyer has no past due accounts.

4. Interest. Interest will be charged at the rate of 1-1/2% interest per month or the highest rate allowed by law, whichever is less, on any balance not paid within the stated terms.

5. Orders. Omron will accept no order less than $200 net billing.

6. Governmental Approvals. Buyer shall be responsible for, and shall bear all costs involved in, obtaining any government approvals required for the importation or sale of the Products.

7. Taxes. All taxes, duties and other governmental charges (other than general property and income taxes), including any interest or penalties thereon, imposed directly or indirectly on Omron or required to be collected directly or indirectly by Omron for the manufacture, production, sale, delivery, importation, commission or use of the Products shall be for the account of Buyer.

8. Financial. If the financial position of Buyer at any time becomes unsatisfactory to Omron, Omron reserves the right to stop shipments or require satisfactory security or payment in advance. Buyer may not resell any Products without Omron’s prior written consent, price list, price, prices, list prices, list, list price, list prices, or list price.

9. Cancellation. No cancellation or rescheduling of orders will be allowed without the consent of Omron.

10. Force Majeure. Omron shall not be liable for any delay or failure in delivery resulting from causes beyond its control, including, without limitation, strikes, lockouts, accidents, acts of God, war or warlike activities, labor disputes or failure to acquire materials or services from other suppliers. If Omron is prevented from fulfilling an obligation by force majeure, it shall notify Buyer as soon as practicable and shall continue to fulfill the obligation as promptly as possible.

11. Shipping; Delivery. Unless otherwise expressly agreed in writing, Omron shall own or be the bailee of any Product in transit until Buyer pays all amounts due to Omron, and risk of loss or damage shall remain with Buyer until the earlier of (a) title passing to Buyer; or (b) such carrier shall act as the agent of Buyer and delivery to such carrier shall constitute delivery to Buyer.

12. Credit Terms and (b) Any Product shipped to Buyer in accordance with these Terms is delivered FOB Omron to Buyer. If Buyer fails to pay Omron for any Product or related charges within the time period specified in the invoice, Omron reserves the right to stop all shipments of Products to the Buyer.

13. Taxes and Duties. Buyer shall pay all taxes, duties and other governmental charges (other than general property and income taxes), including any interest or penalties thereon, imposed directly or indirectly on Omron or required to be collected directly or indirectly by Omron for the manufacture, production, sale, delivery, importation, commission or use of the Products.

14. Limitation on Liability; Etc. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER WARRANTY, WHETHER EXPRESS OR IMPLIED, FOR THE PRODUCTS. OMRON DISCLAIMS ALL WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, QUALITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. THE USE OF PRODUCTS IS AT YOUR SOLE RISK. THE PRODUCTS WILL NOT SUIT THE REQUIREMENTS OF YOUR INTENDED USE. Omron shall in no event be liable for any consequential, incidental, indirect, punitive, special or exemplary damages or losses, including, without limitation, loss of profits or production or commercial loss in any way connected with the Products, whether such loss is based in contract, warranty, negligence or strict liability. Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

15. Indemnities. Buyer shall indemnify and hold harmless Omron Companies and their employees from and against any claims or expenses (including attorney’s fees and expenses) related to any claim, investigation, litigation or proceeding (whether or not Omron is a party) which arises or is alleged to arise from Buyer’s acts or omissions under these Terms or in any way with respect to the Products. Without limiting the foregoing, Buyer (at its own expense) shall indemnify and hold harmless Omron and its divisions or affiliates and their respective directors, officers, employees, or agents and Omron shall have the right to use any and all action brought against such Companies to the extent based on a claim that any Product made to Buyer specifications infringed intellectual property rights of any third party.

16. Property; Confidentiality. Any intellectual property in the Products is the exclusive property of Omron. Buyer acknowledges that it alone has determined that the Products are suitable for Buyer’s intended use. Buyer may not disclose to non-citizens of the United States or to any person to whom it is prohibited to disclose such information.

17. Export Controls. Buyer shall comply with all applicable laws, regulations and licenses regarding (i) export of products or information; (ii) sale, lease or use of the Products in combination with any electrical or electronic components, circuits, system assemblies or other materials or substances or environments.

18. Miscellaneous. (a) Waiver. No waiver or delay by Omron in exercising any right or no course of dealing between Buyer and Omron shall operate as a waiver of rights by Omron. (b) Assignment. Buyer may not assign its rights hereunder without Omron’s written consent. (c) Law. These Terms are governed by the law of the jurisdiction of the home office of the Omron company from which Buyer is purchasing the Products (without regard to its conflict of law provisions). (d) Amendment. These Terms constitute the entire agreement between Buyer and Omron, and Buyer acknowledges the correctness of the information in writing by Omron, and乙方 omron disclaims all other warranties, express or implied, (e) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER WARRANTY, WHETHER EXPRESS OR IMPLIED, FOR THE PRODUCTS. OMRON DISCLAIMS ALL WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, QUALITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. Omron will provide applicable third party certification documents identifying the Products.

Certain Precautions on Specifications and Use

1. Suitability of Use. Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer’s application or use of the Product. At Buyer’s request, Omron will provide applicable third party certification documents identifying rating of the Product. Any such document is provided at Buyer’s expense and, unless otherwise stated, is not sufficient for a complete determination of the suitability of the Product. Additional and/or alternative testing and/or evaluation by Buyer may be required. Omron shall not be responsible for determining appropriateness of the particular Product with respect to Buyer’s application, product, or system.

2. Programmed Products. Omron Companies shall not be responsible for the incorporation, programming or application of any Product. This information is provided at Buyer’s expense and may not be sufficient for a complete determination of the suitability of the Product.

3. Performance Data. Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's testing, and the user must correlate it to actual application requirements. Actual performance of the Product may vary due to factors such as, but not limited to, the nature of the test and the environment.

4. Change in Specifications. Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please contact your Omron representative to confirm actual specifications of purchased Product.

5. Errors and Omissions. If information contained in this document has been changed and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
