Life Sciences Industry Project Book

INTEGRATED | INTELLIGENT | INTERACTIVE

The Life Sciences Industry

The life sciences industry is challenged with achieving greater efficiencies, lower life-cycle costs, maintaining product quality and driving compliance with real-time actionable insights. Addressing these challenges today and for the future is possible only with 100% data integrity and reliable components that are small enough to fit into instruments. From reading labels on specimen tubes or directly marked surgical instruments to automated presence/absence detection

of microtiter plates – the life sciences industry can depend on Omron for the highest levels of performance.

Omron is your trusted partner for medical device manufacturing, clinical and in vitro diagnostic instruments, laboratory automation solutions and pharmaceutical processors and packagers.

Browse through this project book to discover industry-leading solutions, learn about the most popular products and read through implementation successes.

Solutions fit for the future, but ready today

Omron solutions set the foundation for the future, solving your most complex applications today while ensuring your facility is smart, secure, connected, flexible and compliant for the future. Comprised of next-generation technologies, services and backed by 80+ years of experience, our solutions help maintain product quality and compliance, decrease validation costs and increase production flexibility.

Medical Device Manufacturing

Regulations and internal manufacturing mandates provide immense pressure. Omron offers solutions that improve productivity and quality, increase visibility for traceability, achieve regulatory compliance and ensure safety. These solutions are tailored for medical device manufacturers and are engineered for ease-of-use.

Collaborative automation

Increase productivity and improve product quality through collaborative robotics with integrated vision.

- Prevent repetitive stress injuries
- Detect manufacturing abnormalities
- Read data on an HMI to make production decisions

Production optimization through data: OEE

Optimize production by turning machine data into high value, actionable information.

- Identify bottlenecks and production losses
- Improve predictive or proactive maintenance
- Provide visibility into complex processes

Labeling for regulatory compliance

Ensure labels are printed legibly and with the correct information.

- Verify off-line and in-line 1D and 2D codes, including OCR and OCV
- Electronically store and access data for internal traceability and FDA audits
- Maintain compliance with GS1, UDI, 21 CFR Part 11

Clinical / In Vitro Diagnostics

Diagnostics designers and manufacturers need data integrity and reliable components that are small enough to fit into instruments - from tracking patient identification on specimen tubes to enhancing instrument throughput. Manufacturers depend on the highest levels of performance with minimal integration effort. From immunoassay, clinical chemistry, hematology and hemostasis to urinalysis, sample transport, slide staining for pathology and many more, Omron supports your sector.

Deck calibration for liquid handling

Increase instrument accuracy to fine tolerances.

- Automatically calibrate your system before new runs
- Inspect every tube before aspirating any liquid
- Eliminate the chance of broken pipette tips

High speed code reading

Read labels and accurately record data for sample tubes and reagent packs.

- Reagent, sample or tube carrier ID
- Match test to sample
- Sample routing and tracking

Sample tube characterization

Analyze defined sample tube characteristics for error-proof throughput.

- Tube height and diameter; cap detection, color and shape
- Microsample cup detection (pediatrics)
- Pipette alignment and detection

Laboratory Automation

Increase productivity, efficiency and speed without sacrificing quality. Omron offers a suite of laboratory automation solutions to automate key pre- and post-processing steps. This helps reduce potential errors, maximize machine workflow and better manage laboratory productivity and safety.

- Provide uniform hardware and software interfaces
- Collaborate on repetitive tasks, with accurate reliability
- Reduce validation and documentation
- Reduce product variation
- Allow for predictive maintenance and lower inventory of spare parts

Lab workflow optimization through robotics

Increase the reliability of throughput by utilizing robotics.

- Reduce deployment costs with zero facility modifications
- Automating repetitive tasks such as assembly
- Perform complete machine tending
- Utilize autonomous mobile robots to improve workflow

Pharmaceuticals

Ensure pharmaceuticals are consistently produced according to regulations that state every component must be documented and traceable at any point during manufacturing. Omron has a proven solution that supports the handling of electronic records, validations, audit trails, user management, documentation as well as managing data integrity.

- Validation services
- Detecting and eliminating potential errors at the earliest point possible
- Establishing procedures for regulatory compliant operations
- Predicting Utilize autonomous mobile robots to improve workflow. failures before they occur

Serialization

The ability to trace individual products (item-level) through the supply chain.

- Ensure compliance with global standards including DSCSA
- Connect to ERP/MES and cloud solutions
- Track products from production line to patient

About Omron Automation

Omron Automation is an industrial automation partner that creates, sells and services fully integrated automation solutions that include sensing, control, safety, vision, motion, robotics and more. Established in 1933 and currently headed by President Yoshihito Yamada, Omron's 30,000 employees help businesses solve problems with creativity in more than 110 countries. E2E NEXT - Long Range DC 3-Wire Inductive Sensors

- Industry leading sensing distances with up to 4x the sensing range of standard models
- IO-Link is standard with DC 3-wire PNP models Multiple connection Types
- Multiple connection Types (including M8 QD, M12 QD, M12 Pig-tail QD, PVC cable and PVC Robot Cable)
- Harsh condition robustness with IP67, IP69K, and IP67G

E3AS-L - Photoelectric Sensor

- Enhanced background suppression-Reduced black/white error and differential travel
- 200mm or 80mm sensing range
- IP69K and IP67G
- Ecolab tested and certified detergent resistance
- Single teach button
- IO-Link configurability

E3S-DC - Color Mark Detection Sensor

- High signal to noise ratio detects subtle color differences.
- High luminance, three-element (RGB) LED light source for greater light intensity.
- Highly efficient optics technology provides high power and enables stable detection even of subtle color differences.

Type	Sensor Distance	Connection	Output	Baud Rate (IO-Link)	Model
Diffuse - reflective (mark detection)	10 ± 3mm	M12 Connector	PNP	COM 3 (230, 4 kbps)	E3S-DCP21-IL3

E3NX-FA - High Speed Digital Fiber Amplifier

- Easy teaching by Smart tuning within a few seconds
- New N-Smart technology provides significant improvement for sensing distance, minimum object detection and speed
- Easy and transparent information about sensor status by Solution Viewer and Change Finder function
- EtherCAT Communication unit for high-speed field bus connectivity

Setting/Function	Sensor Distance	Inputs/Outputs	Connection	PNP Model	NPN Model
Standard Models	Sensing distance up to 4m depending on fiber used	1 output	2 m	E3NX-FA41 2M	E3NX-FA11 2M

Note: Infrared standard models are available as well as connector options for standard, advanced, and infrared models.

E3X-HD - Advanced Fiber Amplifier

- Simple one-button smart tuning for sensor threshold and light intensity
- Confirm settings and status easily with dual digital display
- Automatic compensation for large objects and low reflectance dark targets

Setting / Function	Range	Connection	PNP Model	NPN Model
Advanced digital amplifier	Up to 4m depending on fiber model	2m Cable	E3X-HD41 2M	E3X-HD11 2M

E3X-NA / SD - Fiber Optic Amplifiers

- Easy adjustment with potentiometer
- Mutual interference prevention
- Enhanced water resistance types

Setting / Function	Distance	Connection	PNP Model	NPN Model
Potentiometer and Bargraph	Depending on the fiber optic model	2m Cable	E3X-NA41	E3X-NA11
Teach Button and digital display			E3X-SD51	E3X-SD21

E3NX-CA - Colormark Fiber Amplifier

- High signal to noise ratio makes subtle color difference detection easy
- Able to handle glossy materials
- Stable even when lots change

Model	Sensor Distance	Connection	Inputs / Outputs	PNP Model	NPN Model
Standard Model	Sensor distance depends on selected fiber model	2m Cable	1 output	E3NX-CA41 2M	E3NX-CA11 2M
Advanced Model			2 outputs / 1 input	E3NX-CA51 2M	E3NX-CA21 2M

E3ZM-V - Colormark Detection Sensor

- Compact SUS 316L colormark photoelectric sensor
- Ideal for high contrast colormark detection in a small package
- IP69K and IP67 rated for environmental robustness
- 50 us response time
- Single teach button

Type	Sensor Distance	Connection	PNP	NPN
Diffuse - reflective (color mark detection)	12 ± 2mm	Pre-wired	E3ZM-V81 2M	E3ZM-V61 2M
		M8 Connector	E3ZM-V86	E3ZM-V66

ZX1 - CMOS Laser Measurement Sensor

- Down to 2um resolution
- Best in class performance for accuracy and speed
- Increased measurement range
- Stable measurement for objects with any surface
- Simple configuration by one-button, Smart Tuning
- Compact size for quick mounting

Range	Resolution	Connection	PNP Model	NPN Model
50 ± 10 mm	2um	2 m Cable	ZX1-LD50A81 2M	ZX1-LD50A61 2M
100 ± 35 mm	7um		ZX1-LD100A81 2M	ZX1-LD100A61 2M

Sensor Cordsets

- Standard PVC or PUR cordsets for a wide variety of applications
- M8 and M12 connector sizes with 3 and 4 pin configurations
- Straight, right angle, and double ended variations available
- 2m, 5m, and 10m cordset lengths are available. Alternative lengths are also available

K6CM - Motor Condition Monitor

- 24/7 remote monitoring of critical 3-phase induction motors
- Can monitor motor vibration, temperature, current, and insulation resistance depending on model
- EtherNet/IP and Modbus TCP communication
- Included monitoring software tool can monitor up to 10 motors at one time

Motor failure mode	Description	Power	Controller model	Sensor Model
Bearing Wear	Monitors motor vibration/temperature with sensor	24 VAC/DC	K6CM-VBMD-EIP	K6CM-VBS1

K6PM - Thermal Condition Monitor

- 24/7 remote thermal monitoring of equipment using infrared thermal image sensors
- Thermal Imaging Sensor that detects temperatures 32-392°F (0-200°C)
- EtherNet/IP and Modbus TCP communication
- Included monitoring software tool can monitor up to 155 sensors at one time

CP1H – MicroPLC for 4 Axis Position Control and High Speed Control

- High-speed counters with differential phases and pulse outputs for 4 axes control. Easily handles multi-axis control with a single unit.
- Up to two Ethernet ports and two serial ports when selecting the appropriate optional communications boards
- Up to 40 Built in I/O points with Analog I/O built in on XA CPU units
- Over 30 different expansion units for I/O, temperature sensing and communications

CP2E - Micro PLC for Data Collection and Machine-To-Machine Communication

- Up to five communications channels: dual Ethernet and up to three serial ports for data collection, machine-to-machine or IIoT
- Built-in I/O of either 14, 20, 30, 40 or 60 points with up to 180 I/O points when using expansion modules
- Up to four axes of motion control for precise machine movement

NX1P - Machine Automation Controllers

- Compact entry model with integrated motion and machine control. Connectivity to safety and vision systems
- Up to 4 axes of coordinated motion control plus 4 axes point to point control
- Expandable I/O using up to 8 NX series I/O cards on local bus
- Built in EtherCAT and EtherNet/IP ports
- Connect up to 16 EtherCAT Slaves
- Sysmac Studio IDE for flexible, scalable programming

Omron Helps Life Sciences Company Extract Data from Legacy Controller

Legacy equipment can pose significant challenges for manufacturers. On the one hand, it is equipment that – for the most part – functions well and gives operators the comfort of familiarity. On the other hand, it may be outdated and incapable of integrating with newer technologies. Omron recently helped a company enjoy the best of both worlds by incorporating new edge devices that allowed for better productivity tracking without requiring the legacy controller to be changed in any way.

Omron prides itself on an exceptional ability to take customers' unique needs into account and come up with creative, workable solutions around them. This success story showcases Omron's strategic approach to customizing products and

platforms for a specific situation.

Omron took a long-term approach to what – at first glance – appeared to be a short-term project. Instead of merely looking at the immediate need, Omron laid out an entire communications strategy that started with the individual machine and then travelled through a line level, a room level and ultimately to the global server.

At every step of the way, Omron made sure to fully satisfy the requirement that no changes be made to the hardware or code of the PLC. The goal was to find an affordable way to extract data from the legacy equipment without altering its operating state or changing it in any way.

Business need

A global life sciences company was unable to collect important data from an older PLC that didn't have Ethernet connectivity. This data was essential for process control and OEE tracking.

Unique solution

Since the legacy PLC was an Omron C200HE with an RS232 port, Omron added one of its NX1P controllers as an edge device external to this machine. This made it possible to collect data from the PLC via FINS.

Customer benefits

Omron's solution gave the life sciences company access to much-needed data using its first-ever edge device. The company was also able to move machines around the world without losing track of their location or performance history.

The solution

Sysmac

The need

A global life sciences company known for its broad range of branded generic drugs, medical devices, diagnostic assays and nutrition products found that it was unable to collect much-needed data from an older programmable logic controller (PLC) that lacked Ethernet connectivity. This data was essential for process control and Overall Equipment Effectiveness (OEE) tracking. In addition, senior management had key objectives tied to factory efficiency and required a means of determining baseline productivity levels and tracking improvements.

Although the PLC was more than 15 years old, neither its hardware nor its coding could be changed because it was FDA validated. This posed significant challenges for extracting the necessary data.

The life sciences company desperately needed to access the data in order to streamline production processes, maximize equipment throughput and improve overall quality. It turned to Omron for assistance with gathering the as-yet-inaccessible OEE and process control data from the old PLC.

The technology

Omron determined that its powerful, all-in-one machine automation controller known as the NX1P would be the ideal addition to the Ethernet-incompatible legacy machine. The NX1P is designed to manage advanced motion, networking, I/O and enabling IIoT solutions on the plant floor.

With integrated sequence and motion control, battery-free operation and up to eight axes of control via EtherCAT in a compact casing, the controller served as an excellent entry-level model on which to start building the new data flow network. Omron developed a networking strategy on top of the NX1P using its Sysmac platform with custom-developed Dynamic Host Configuration Protocol (DHCP) capabilities. Sysmac is a robust and fully integrated machine automation platform that uses a single connection and single software. End users can take advantage of its complete machine control capabilities to seamlessly scale up their machinery in accordance with specific application needs.

As it turned out, the older PLC was an Omron C200HE with an RS232 port. By adding the

The outcome

NX1P as an edge device external to this machine, it became possible to collect data via FINS (Factory Interface Network Service) without any modifications to the existing machine or the PLC program.

If the older PLC had not been an Omron unit, an alternate solution would have involved monitoring the I/O or any available communication protocols and turning this information into CIP (Common Industrial Protocol) data that would flow up through the data network. Thanks to Omron's creative solution, the life sciences company soon had its first edge device running smoothly and collecting data. In addition, the company gained the ability to move machines around to different parts of the globe while keeping track of their current location and performance history.

Omron's strategy is to always keep the customer's unique needs in mind while thinking in terms of future needs as well. This strategy paid off significantly for the life sciences company, which now has a future-proof means of extracting data from a legacy PLC using a complete yet affordable communications system.

Omron helps packaging equipment manufacturer design a flexible system for reading barcodes on bottle labels using MicroHAWK ID-40/V430

Packaging Efficiency Solutions (PES), a packaging equipment manufacturer based in Denville, NJ that specializes in solutions for food and beverage, pharmaceutical and nutraceutical companies, was approached by several customers seeking a reliable system for reading barcodes on bottle labels to improve serialization and verification. The target customers for this system would be pharmaceutical manufacturers and CMOs engaged in serialization activities as well as consumer goods CMOs using the system to allow label and print verification on all bottle sizes and shapes.

As with any automated system meant to work for a variety of end users, flexibility was paramount. To make the new system accessible

to the broadest possible range of customers, PES needed to keep the overall machine footprint small and invest in highly intuitive technology that would minimize installation and maintenance needs. Finally, PES was hoping for a system that would exceed the level of reliability currently being used by its customers.

PES tapped Omron to design the new system, and Omron selected its popular MicroHAWK barcode readers as the key technology. Omron partnered with Saddle Brook Controls, a distribution partner based in New Jersey, to help with integration and testing. As a local company, Saddle Brook Controls has been able to provide quick support with respect to implementation and optimization.

Business need

A packaging equipment manufacturer needed a flexible, reliable and cost-effective system for reading barcodes on bottle labels that it could sell to its food and beverage, pharmaceutical and nutraceutical customers.

Unique solution

Omron designed a flexible system using six MicroHAWK ID-40/V430 cameras to minimize false rejects while keeping the overall machine footprint to a minimum.

Customer benefits

Thanks to the flexibility and compact size of the MicroHAWK cameras, the new system has helped PES become a leading resource for serialization and inspection systems.

The solution

A compact system using MicroHAWK

The need

The new system – which would be dubbed the “PES-360” – needed to reliably inspect all angles of the bottle/label at speeds of up to 100 bottles per minute. In addition, PES’s customers wanted to enhance the system’s flexibility by limiting its overall footprint and reducing the amount of integration and line modifications required for installation. Existing market suppliers were offering systems that were fairly large and quite expensive, so PES was hoping Omron would be able to come up with a more compact and cost-effective solution.

Some of PES’s customers were already using automated bottle inspection systems, but these didn’t use enough cameras to be fully reliable. Since they took just a single image per camera per bottle, they had an elevated occurrence of false rejects or no response. The PES-360 needed to make sure that every point on the circumference of the bottles would always be seen by at least one of the system’s cameras.

The technology

To combat the issue of false rejects, Omron used six cameras – initially MicroHAWK ID-40 cameras but transitioning to V430 cameras as the latest technology – to achieve maximum performance. The MicroHAWK Series is known for small size and easy installation, and the family’s compact design allowed Omron to integrate up to seven cameras in each unit (with six cameras situated around the conveyor and one either above or below). The PES-360 takes advantage of the cameras’ ability to capture images in bursts as opposed to a single image per trigger, which provides more chances to successfully inspect and decode the data.

The MicroHAWK readers are easily integrated into the current control system, where the standard/configurable I/O offers greater flexibility in machine logic setup. In addition, the system’s ability to communicate data match strings via TCP/IP messages minimizes hardware requirements, and the use of self-contained smart cameras reduces the need for more skilled technical resources to interface with traditional PC-based camera systems.

The outcome

Omron has already integrated over thirty PES-360 systems into customer lines, and the solution has helped PES become a leading resource for serialization and inspection systems. The MicroHAWK cameras work wonders when it comes to giving system integrators like PES more flexibility. Depending on the application, Omron has a wide variety of MicroHAWK resolutions to choose from without having to change the overall system’s mechanical design. There are many options for internal lighting, but there’s also the option to utilize external lighting when required. PES is currently using SXGA (which is a 1.2MP sensor) with integrated lighting.

Another benefit of the MicroHAWK ID-40/V430 cameras is that their barcode reading capabilities can be easily upgraded to a machine vision smart camera without requiring any mechanical changes to a customer’s equipment. Based on the success of the PES-360 and the ease of collaborating with Omron, PES is looking into partnering with Omron for a variety of other vision inspection and code reading applications.

V410H - Handheld Barcode Reader

- Labels or Direct Part Mark barcode reading
- High resolution 1280 x 800 pixels
- Read ranges from contact to 28 inches
- Intuitive and insightful WebLink PC utility and run time with image storage, statistics, reader discovery, troubleshooting and extensive tool tips

Omron helps medical device contract manufacturer improve labeling speed and accuracy with LVS-7510 printer-integrated system

A multinational medical device contract manufacturer of stents, balloons and catheters needed to be able to easily shift manufacturing lines across its multiple facilities from development to mass production. Each facility was doing the same type of work, and it was necessary to maintain precision and accuracy as demand increased. The customer is opening a new R&D facility that will function as a prototype location for building a “Golden” manufacturing line as well as a space to be used to manage temporary production increases.

The customer reached out to Omron for a solution that would help with speed and consistency in labeling across its many facilities. Label accuracy is imperative in the medical device industry, as any incorrect information can lead to fines, recalls and a reduction in consumer confidence. In order to comply with FDA UDI standards, all medical device manufacturers are required to format their labels in a specific way so that end users can easily identify package contents. This includes a unique device identifier (UDI) that must be issued through an FDA-accredited agency.

Business need

A multinational medical device contract manufacturer needed to improve labeling speed and accuracy as demand increased across its several facilities.

Unique solution

The customer replaced time-consuming manual inspections with the LVS-7510 Series printer-integrated label inspection solution from Omron.

Customer benefits

The customer was able to get the system up and running very quickly, allowing two operators who had previously been working on label inspection to focus on other tasks.

The solution

Printer-integrated label inspection

The need

Prior to investing in a new in-line label inspection system from Omron, the medical device manufacturer had its employees perform inspections manually. Two people would be required to visually inspect each label for accuracy and print quality. This process involved not only the human-readable information on the label, but also the automatic identification portion (essentially, the information contained in the barcode).

The FDA UDI mandate also requires barcodes to be of a certain quality threshold to help ensure that they will be readable throughout the supply chain. Any barcode reader can validate whether a code is readable, but simple validation isn't enough to guarantee a passing grade. It's possible to grade barcodes manually if volumes are small and the inspection team is well trained on the changing standards, but it becomes unmanageable once manufacturing starts being moved between facilities for a larger variety of products that each have unique requirements.

The technology

Omron has worked with the world's leading printer manufacturer to create the LVS-75xx Series printer-integrated label inspection solution, which is the only barcode quality grading system compatible with Zebra thermal printers that complies with ISO 15426 and GS1 standards. With inspection reports for 100% of produced labels, users can be assured that full compliance with regulations is achieved and that no products are shipped with defective labels.

Omron sold the medical device manufacturer an LVS-7510 system with specifications fitting the exact customer need. The system creates templates for each requisite label format that can then be saved in the cloud and accessed across all facilities. This helps transitions from one facility to another flow seamlessly and guarantees that every label produced meets a global standard created by a team of experts in these regulations.

The outcome

Removing inspection-related decisions from floor-level employees has resulted in less mandatory training on individual standards as jobs change. Thanks to the solution's light stack and visual UI that alert operators when direct attention is needed, a single employee can either run multiple systems at once or focus on other operations in the manufacturing line. Omron also provided an IQ/OQ/PQ package to help users get up and running quickly with the system, saving the customer what could have been months of work.

The customer was able to immediately implement the system and begin designing label templates for their other locations. Two operators who had been working on label instruction were able to move their focus to other tasks, and the concern about faulty labels is much diminished. The manufacturer will continue to implement this solution across its multiple facilities as well as other contract manufacturing sites.

FS Series GigE Vision Line Scan Cameras

- Power over Ethernet capable
- Compact case designed for easy mounting
- Offered in 2K, 4K, or 8K
- Available in Single & Dual Line Monochrome and Dual Line Color Models.
- Action Command Triggering: Trigger multiple cameras simultaneously with one command.

NX-SL5 - Safety Controller

- A versatile safety controller, with EtherCAT and EtherNet/IP capabilities, for integrated or stand-alone solutions, making machine safety design, installation, and maintenance easier
- Enable flexible manufacture by supporting different safety networks, CIP Safety and FSoE. Enable a hybrid system, when combining the NX-SL5 with the NX-102.
- Sysmac Studio offers a set of unique functions to make functional safety management easier as Safety Signature Check and Online Function Verification. In addition, reduce the design cycle with automatic programming and simple automatic test.

Product	Description	Model
NX-SL5 Safety Controller Units	Safety PLC, up to 1024 safety I/O and 128 safety connections	NX-SL5500

NX-SL3 - Safety Controller

- Effortless integration into the most common PLC's platforms in the market, providing reliable safety solutions while supporting different configurations.
- Offer a direct connection to any PLC using an EtherNet/IP coupler, and build a stand-alone system. For larger projects, with a higher number of safety devices distributed over a larger area, using an EtherCAT coupler supports EtherCAT and FSoE.
- Sysmac Studio offers a set of unique functions to make functional safety management easier as Safety Signature Check and Online Function Verification. In addition, reduce the design cycle with automatic programming and simple automatic test.

Product	Type	Model
NX-SL3 Safety Controller Units	Safety PLC, up to 256 safety I/O and 32 safety connections *	NX-SL3300 Ver 1.1
	Safety PLC, up to 1024 safety I/O and 128 safety connections *	NX-SL3500 Ver 1.1

* Only FSoE master connections supported

F3SG-SR - Machine Guard Safety Light Curtain

- Three-color Area Beam Indicators (ABIs) enable easy alignment and quick troubleshooting
- Up to 30m protection range (25mm resolution and up)
- IO-Link communication capability helps improve preventive maintenance programs
- Advanced programming features (muting, blanking, pre-reset, warning zone, etc.) are available on all models.
- IP67G rating is standard, with IP69K option available (F3SG-SRB only)

G9SE - Safety Relays

- A compact safety relay for simple safety applications, with screwless terminals and increased diagnostic capabilities for fast troubleshooting and easy wiring
- Modules with two or four safety contacts and OFF-delay timing options
- Compact units, 17.5 or 22.5 mm wide
- Front side wiring using screw less terminals and led indicators for fast diagnostic

Safety Outputs	Auxiliary Output	OFF-delay Max. time	Power	Model
2	1	-	24VDC	G9SE-201
4		-		G9SE-401
2		5 s		G9SE-221-T05
2		30 s		G9SE-221-T30

G9SA - Expandable Safety Relay

- All-purpose expandable safety relays series ideal for high demand applications.
- Ideal for high demand applications.
- Expandable outputs options only, up to 8: instantaneous or time-delay
- Simple expansion connection available

Safety Outputs	Auxiliary Outputs	Power	Model
3	1	24VDC	G9SA-301 AC/DC24

G9SX - Safety Modules

- A versatile safety relay series, ideal for scalable safety solution, support logical “AND” functions for expansion and offer special modules for dedicated safety functions
- G9SX-family modules can be connected by a logical “AND” function to implement partial/global stopping of a machine
- Solid-state outputs, detailed LED diagnosis and clever feedback signals help to keep maintenance easy
- Expansion units with safe timing functions complete the line-up

D40Z - Compact Non-Contact Door Switch

- Up 30 Switches can be connected to one Safety Controller while maintaining PLe/safety category 4
- Can be connected to G9SP or G9SX-NS[] Safety Controllers
- LED indication for easy troubleshooting
- Compact Non-contact Door Switch can be mounted from both sides

Cable length	Auxiliary Outputs	Model
2 m	1	D40Z-1C2
5 m		D40Z-1C5

D40P - Non-Contact Safety Switches

- Hall effect technology provides solid state outputs for increased longevity
- LED indicates operation state
- Operates with all OMRON safety controllers and safety relays
- Connect up to 20 switches in series, up to PLd acc. EN ISO 13849-1

D40ML - RFID Magnetic Locking Safety Switch

- Magnetic latching combines with RFID technology to deliver high holding force and tamper resistance
- Residual magnetism acts as light door latch after unlocking and it provides multiple holding forces
- Clean/Sanitize in Place – stainless steel versions are rated IP69K
- For use on machines with no rundown time if power is lost

D4SL-N - Guard Lock Safety Door Switch

- A wide variety of built-in switches can be used for various devices (4-, 5-, and 6-contact models are available)
- Removable terminal block for easy wiring and quick maintenance
- Key holding force of 1,300N
- Slide key available to prevent workers from becoming trapped inside the hazardous area
- Can be easily mounted on 40 × 40 mm aluminum frames

PMAC Motion Controllers CK3 Series

CK3E - EtherCAT Based Controllers

- 32, 16 or 8 axes motion control
- Up to 250 μ s cycle time
- Compatible with standard G-Code functions
- Save space & wiring thanks to compact design
- CAD/CAM for easy motion control
- EtherCAT for flexible configuration

Number of Axis	Memory capacity	Programming language	Model
8	1G	G-Code/ANSI C/original programming language	CK3E-1210-US
16			CK3E-1310-US
32			CK3E-1410-US

By combining global leading Delta Tau Data Systems' Motion Control technologies, Omron can open up new applications and solutions. The CK3E is a controller designed for precise multi-axis control. You can build a system capable of controlling up to 32 axes of motion and incorporate customized control algorithms into the system. The CK3E allows you to program in C language and reuse existing software assets. The compact design saves space in machines and control panels. EtherCAT® connects servo drives, I/O, and other devices to the CK3E, reducing the number of cables.

CK3M - Modular Controllers

- Local axes for nanoscale precision
- Ultra high-speed synchronous control (50 μ s/5 axes)
- Custom servo regulation algorithms
- Flexibility on using multi-vendor actuators and encoders
- Flexibility on programming on G-code, ANSI C or original programming language

Product Type	Memory capacity	EtherCAT® port	EtherCAT Axes	Expansion	Model
CPU Units	RAM: 1 GB Built-In flash memory: 1 GB	-	-	One expansion rack can be connected using the expansion master unit and expansion slave unit	CK3M-CPU101

			8		CK3M-CPU121

Maximize your machine's performance: Performing precise linear motor drive control and nanoscale positioning, the PMAC (Programmable Multi Axis Controller) has been appreciated by manufacturers of semiconductor manufacturing equipment and other leading-edge equipment. Omron now offers a next generation motion controller CK3M that packs PMAC's superior motion control capability, multi-vendor connectivity, and flexible development capability into its compact design. The CK3M removes constraints and barriers and maximizes your machine's capabilities.

1S Series - Servomotor

- Advanced design allows easy installation and wiring
- EtherCAT communications up to 125µsec
- Safety over the EtherCAT network
- Motor has 23-bit battery less absolute encoder
- 350% momentary torque (200 V, 750 W max.)

LD Series – Autonomous Mobile Robots

- Simplified programming and navigation using digital mapping
- In compliance with safety standards ISO 12100, ISO 14121-2 and ISO 13849-1
- Rechargeable battery with autonomy of 12 to 15 hours and self-management for recharging
- Connectivity with factory management software (MES/WMS)
- Cleanroom and ESD options available

HD-1500 – Autonomous Mobile Robot

- Natural feature navigation: Automatically plans efficient routes and prevents collisions
- Fleet management: Operates in coordination with a fleet of up to 100 mobile robots
- Easy deployment: Installs quickly, without facility modifications
- 1500 Kg large capacity payload
- Dynamic intelligent 360° safety
- Integrated automation controller

Omron TM12 cobot automates booklet feeding for Kraus Maschinenbau

Cobots streamline processes in medtech and packaging industry

The productivity and efficiency of packaging processes at Kraus Maschinenbau GmbH have been transformed by its close working relationship with Omron. The two companies are already exhibiting the high degree of collaboration that will be essential for workflows in the factory of the future.

As manufacturers progress towards Industry 4.0 (and Packaging 4.0), closer interactions will be needed between both development and technology partners and also between man and machine in the factory. This is why Kraus Maschinenbau has joined forces with Omron to develop an innovative collaborative robot

(cobot) project for its packaging environment. A key element of this involves the Omron TM12 cobot, which is used to optimise the automatic feeding of booklets into pharmaceutical packages. The booklets are multi-page, quite extensive inserts that are added to packages for items such as insulin syringes or other medicines.

In the new solution, the booklets are stacked on approximately one-metre long rods (known as traces), and are taken over by the cobot and fed into the system. The Omron TM12 cobot was chosen as the most suitable solution as it has been shown to reduce the need for manual labour, whilst increasing efficiency and minimising any errors.

“Carton machines have become faster and faster in recent years, and this development will continue. There are now systems that can produce up to 500 packages a minute. At the same time, the booklets for some high-priced medical devices are getting thicker. Feeding them into the packages at a speed of three metres per minute can no longer be done manually and with a simple product magazine. That’s why we’ve developed a system with Omron that significantly speeds up packaging processes in the pharmaceutical sector.”

Joachim Kraus

Managing Director of
Kraus Maschinenbau GmbH

The solution

Cobot boosts productivity

The need

Interact Analysis predicts that the cobot market will reach around US\$5.6 billion by 2027, due to the ongoing development of new applications – as well as the impact of the coronavirus crisis. The TM12 illustrates the powerful potential of cobots: it's a state-of-the-art robot that was specifically designed to enhance the collaboration between people and machines. It can be easily transported and has an integrated image processing system, which enables fast start-ups and product changes. Due to its intuitive software, the cobot can learn almost any task. This enables it to take over recurring tasks, freeing employees for other work and helping to boost productivity.

The technology

Marc Schönenberger, Field Sales Engineer Automation and Drives at Omron, comments: "Thanks to our cobot's fully integrated image processing capability, it can implement even complex and changing tasks, such as the palletising of changing products. This means that an existing production system that was previously designed for manual filling can be seamlessly expanded to include full automation without needing any significant adjustments."

The camera of the Omron TM12, paired with modern lighting technology, enables objects to be detected in a wide field of view and ensures error-free detection under almost all conditions. The image processing system increases the reliability, consistency and precision of pick-and-place processes such as booklet feeding in the medtech environment. It also offers functions such as pattern recognition, barcode detection and colour recognition, which are essential for many inspection, measurement and sorting applications. The risk assessment in accordance with EN ISO 12100 helps to meet the requirements of the Machinery Directive 2006/42 / EC.

The outcome

The cobot project developed by Kraus Maschinenbau and Omron is expected to be presented at Achema 2021. Some companies have already expressed a great interest in the solution. Joachim Kraus praises the collaboration: "At Omron, I get the entire portfolio from a single source – including motion controllers, PLCs, touch screens, drives, sensors, cameras, robots and cobots and servo axes, as well as advice and much more. At the same time, we benefit from having a reliable partner at our side to help us to solve many problems. The technical competence and chemistry between us are very important for development projects in an industrial environment."

Hornet 565 - Parallel Robots
